

# The Climate-KIC summer school: creating Europe's climate change innovators of the future

Europe's biggest climate change summer school brings together nearly 300 students from across Europe to create future climate entrepreneurs.

## The summer school journeys

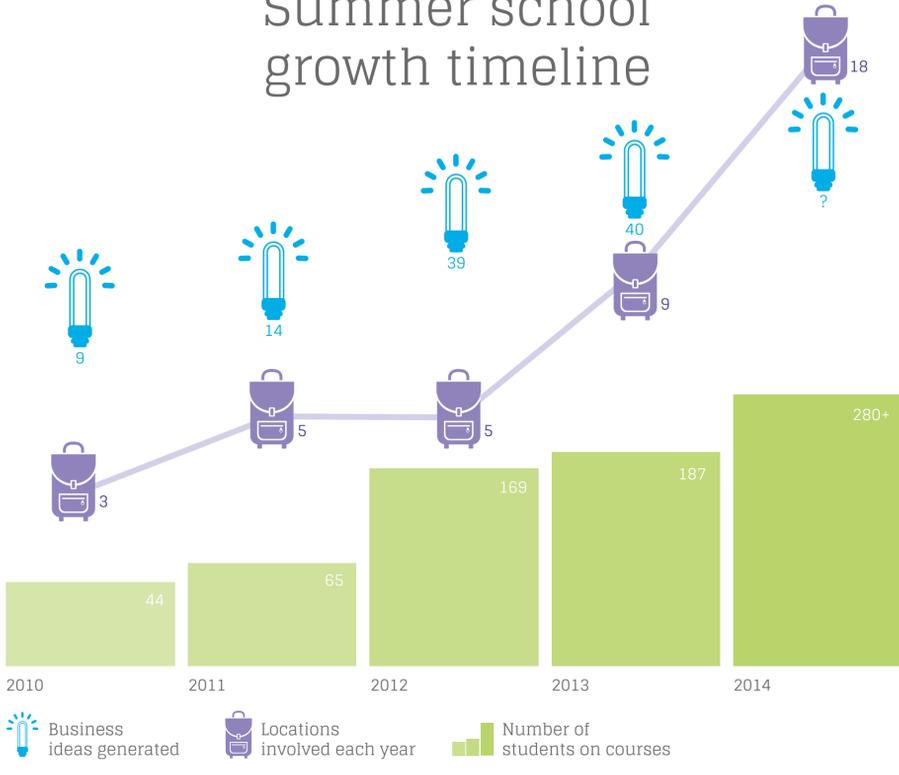

Travelling by train and bus, the students' journeys reflect the true diversity of Europe, with climate innovators as likely to come from Hungary as the UK. But all will be global in their thinking.

Students from around the world

## Summer school growth timeline

## The next generation of climate innovators

The next generation of climate innovators are just as likely to be female as male.

### Gender split of students

They will be just as likely to have a degree in architecture as environmental science but will share an understanding of the challenges presented by climate change and an eagerness to solve them.

### Snapshot of student specialisms

“ I had a fantastic time at the summer school last year, meeting and working with so many talented people from different areas has been very inspiring. ”

Summer school 2013 student Loulou van Ravensteijn from Wageningen University

## Inspiration in numbers

Feedback from summer school 2013 students

Since the summer school started in 2010...

## Industry partners

The students will benefit from real-world experiences in a number of industries, reflecting their own multi-disciplinary backgrounds.

“ We look forward to entering a dialogue with the students at the summer school 2014 and share insights on how innovation can help create more sustainable living in buildings and mitigate climate change. ”

Lone Feifer, Programme Director at the VELUX group

## Creating Europe's climate change innovators of the future

To get more insight into the students' experiences and to follow their journey during the summer school you can read their blog posts at: [climate-kic.org/journey2014](http://climate-kic.org/journey2014)
