

... the advanced home automation in one touch

Control Casa is a cutting-edge home automation system that enhances the safety of your home without imposing rigid structures or processes that alter your lifestyle.

Designed, developed and manufactured by **DAT instruments**, **Control Casa** is an easy-to-install and use home automation system that lets you control all home appliances and systems directly through your smartphone, tablet or PC. With an advanced, friendly user interface, **Control Casa** lets you control all home appliances and standard home systems such as heating, cooling, watering and more. **Control Casa** ensures your home functions to your utmost comfort and desired living style, simply and easily.

Control Casa is compatible with virtually all common household electrical plates, switches and outlets on the market today. With just a few simple touches on your **smartphone**, **tablet** or **PC**, you will have complete command to immediately create your favourite home environment. **Control Casa** features a wide array of functions and modes that allow adjustment and control of not only lightening and heating systems, but also sound systems, swimming pools, wellness areas and lawn and garden irrigation, all according to real-time weather forecasts.

Control Casa technology creates 360-degree home comfort while also ensuring comprehensive home security. **Control Casa** security functions check to make certain your home's entry points - doors and windows - are closed and locked by a preset time, according to your habits and needs. The advanced alarm system includes the latest-generation sensors that detect water or gas leaks and smoke and carbon-dioxide dangers.

In addition to controlling home comfort and safety, **Control Casa** can reduce home operating expenses by automatically controlling lighting and energy use throughout the home.

The **Control Casa** system consists of a CPU and software to run all home functions and settings, with Wi-Fi connection for remote control. A safe communication bus is used to enhance signal reliability and data transferring speed. A fully integrated board that

... the advanced home automation in one touch

communicates with the CPU can be installed in every room of the home. **Control Casa** also includes a back-up power supply so your home systems are still controlled in the case of a power outage.

Just some of the Control Casa features included:

EVO-Chef let you set and start the oven when you are not at home.

CTRL-Drop controls the heating system and monitors for water leaks.

EVO-Welchome welcomes your guests in unexpected style, opening gates and doors remotely with your smartphone, tablets or PC.

With **EVO-Spa**, your home bath becomes a spa-like experience, with the system setting the right music, volume and even dimming lights to the desired level.

EVO-Ride is designed for the motorcycle or bicycle riders of the house, while also helping anyone going for a walk or a run. A handlebar button - or a smartphone or tablet interface - lets the user access the home without breaking stride.
