Business Statement:

Baxa Corporation is a leading developer and manufacturer of innovative devices and systems for the safe and efficient preparation, handling, packaging, and administration of medications. The company's achievement of certification to the International Standards Organization (ISO) quality standards and registration to EN46001 (CE) assure its products meet the highest level of design and production capability in the industry.

Key Products and Applications:

Baxa manufactures and markets a wide range of healthcare products used worldwide in hospital, critical care and alternate site pharmacies:

The **Exacta-Med[®] Oral Liquid Dispenser** and the **NeoThrive[™] Enteral Syringes** provides accurate and safe delivery of oral and enteral liquid medications through a special design that will not accept a needle. Dedicated connections prevent wrong-route administration of non-sterile drugs and fluids.

The **Rapid-Fill[™] Automated Syringe Filler** automates the process of filling, capping and labeling sterile syringes in the pharmacy, minimizing the potential for contamination and reducing pharmacy overhead for batching applications.

The **Baxa Repeater[™] Pump** was the first peristaltic pump developed exclusively for pharmacy applications. Designed for batch filling of oral medications and pharmacy admixture applications such as drug reconstitution and filling of IV bags and infusion devices, the Repeater Pump features volume accuracy not found in competitive pumps. This patented technology is at the core of all the Baxa pump products.

The **Exacta-Mix[™] Pharmacy Pump** operates with the same precision and accuracy of the Repeater pump, but its unique valve controller directs fluid delivery from six different sources. Direct Entry[™] Software provides continual quality assurance for volumetric and gravimetric verification of solution accuracy.

The **Exacta-Mix 2400 Compounder** is the state-of-the-art for multi-source automated compounding. Combining safety, accuracy and specialized software, the EM2400 can accommodate up to 24 discrete source ingredients.

The **Baxa MicroFuse[®] Infuser** is an economical syringe delivery device for intermittent administration of IV antibiotics and other medications. Syringe infusion offers a significant cost advantage over proprietary IV systems, while providing accurate and controlled drug delivery.

The **Skills Training, Academics and Resources (STAR) Center[®]** is the first purpose-built facility for professional development in pharmacy, healthcare and environmental control. The Baxa headquarters facility features an 836 ft² Class 7 positive-pressure cleanroom, a 300 ft² negative-pressure cleanroom and a 1450 ft² classroom.

The **Productivity and Compliance Tools (PACT)[™]** products and services include clinical support, training programs, compliance tools and consulting services. PACT includes the STAR Center for expert training and development, CriticalPoint[™] for comprehensive Web-based training and the MedBoard[™] System for complete medication tracking.

Baxa also manufactures a complete line of complementary products and disposables designed to streamline the operations of hospital and alternate-site pharmacies.

Founded: 1975, as Baxa Laboratories

Employment: 425+, worldwide

World Headquarters: Englewood, Colorado
Sales, marketing, manufacturing and R&D facilities.
