

Clean Marine Systems™

"obsession for excellence"

"OBSESSION FOR EXCELLENCE"

Clean Marine Systems, Inc. is poised to set new standards in the marina and yachting industries.

We are introducing new products to the marine and yachting industry that will most certainly become the "standards" for the era we are now entering.

Clean Marine Systems, Inc. consists of a group of dedicated, professional, marine and yachting enthusiasts. Our dedication begins with an "across the board" love of boating and an equal enthusiasm for the oceans waterways around the world. We want our customers to be able to enjoy the lifestyle and sport in the most environmentally conscientious manner possible while enhancing the performance and quality of their Vessels.

How do we do this? First, we are "Keeping An Eye On Everything Below Deck"™. Why? Because we know that if your vessel is closely looked after, there will be fewer breakdowns and fewer worries while away from the marina.

Second, we believe that NOW is the time to take care of our Oceans. We are offering products that stop water pollution caused by the daily fuel spills at the fueling docks, as well as prevention products that inhibit the vessels bilge pumping of pollutants into the waterways.

Keeping An Eye On Everything Below Deck

Clean Marine Systems™

"obsession for excellence"

Introducing the newest in vessel Intelligent Maintenance Systems from Clean Marine Systems, Inc.

“Automatic Heat Exchanger Cleaning System”

Patent Pending

Never before has it been so easy to maintain your heat exchangers!

All you have to do is turn your engines off and our system goes to work.

The Clean Marine System™ monitors and cleans your heat exchangers and sea strainers automatically.

The Powerful PME uses intelligent solid-state relays for the switching of loads and over-current protection. The PME is field configurable or can be programmed at the factory.

The PME is capable of controlling 21 outputs. It is epoxy potted in a thermally conductive electrical UL rated potting compound. This solves the problem of screws rattling loose or unwanted water infiltration.

It starts with the Control Center and Keypad.

Conveniently located user controls at the helm and in the engine room. Fully automated waterproof Digital Switching Systems (DSS) electronic control. Superior reliability with RS4.85 communication interface.

The Clean Marine System™ is always on the job. We've built the system to be robust and waterproof to withstand the harshest marine environments.

Optional equipment: Flow sensor monitors and displays for all raw water systems.

Peace of mind with 2 Year No Fault Limited Warranty*. *(Installation by licensed technician required)
