

Rapid Application Enhancement for Oracle E-Business Suite

CS*Accelerate is a fully integrated software suite for Oracle E-Business Suite that enables you to enhance and streamline Oracle E-Business Suite in ways ordinarily considered impossible due to a number of factors; the four main factors are high development costs, long development times, high support costs and high risk.

Solutions in an instant

Enhancement development with CS*Accelerate is very easy and very rapid; typically, development is 95% faster.

Don't pay the ransom

Don't pay expensive consultants to provide solutions, which are limited by the experience of the consultants, restricted by cost, take months to implement, difficult to support and are high risk. Implement the enhancements your enterprise really needs within realistic time-scales and at a cost you can afford. Empower business process owners and reduce the dependency and burden on IT.

Enterprise in control

CS*Accelerate puts your business back in control; no longer do your business processes have to be altered to match the applications functionality and no longer do you need to rely on additional resources to tailor your applications.

Oracle's Vision

Stay fully inline with Oracle's vision and message of *zero customisation*; CS*Accelerate does not alter any standard code in any way and as such the risks normally associated with tasks are non-existent; streamline through configuration not customisation.

Typical Enhancements

The screenshot shows a 'Sales Orders' window for 'CLAREMONT AUTOMATICS LIMITED'. The window title is 'Sales Orders (1108283) - CLAREMONT AUTOMATICS LIMITED'. The 'Order Total' is 2,205.48. The 'Line Total' is 1,877.00 and 'Service Total' is 0.00. The order description is 'HOT ROCKS GEN 2002 CAB'. The screenshot is annotated with several callouts:

- Alternate window title
- Navigational Enhancement from Item field to Items screen
- Dynamic field formatting and labelling
- Improved efficiency - defaulted values
- Improved security and efficiency - Tabs removed or disabled
- Fields removed, repositioned or disabled
- Improved security - Updates only allowed for a specific responsibility
- Buttons relabelled, repositioned, disabled or hidden

Figure 1: Here we have a few typical enhancements that can be made with minimum fuss, no coding and minimal risk.

Enhance, Personalize and Streamline without Risk

CS*Accelerate allows you to enhance and personalize your enterprise applications and ultimately streamline your business. The practice of enhancing Oracle E-Business Suite screens is generally frowned upon, Oracle want you to use your applications out of the box but in many scenarios your business may require that certain enhancements are made. The traditional route is cumbersome, requires a high level of technical skill, very costly and above all else carries unwanted high risk. You risk compromising your applications, your data, your support from Oracle and also the business if you make changes to the applications.

If you opt for the traditional route then you also greatly run the risk of having to constantly re-develop your enhancements each time the system is patched or upgraded. The CS*Accelerate approach almost completely eliminates this ongoing maintenance issue.

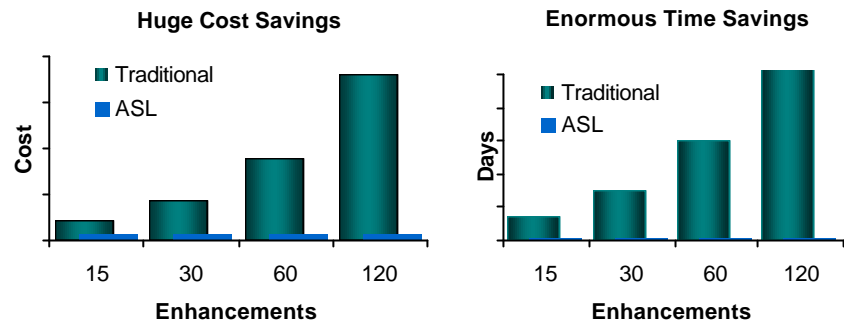

No longer will your end-users enhancement requests be denied. Within minutes of approving an enhancement request the solution can be deployed and helping the user perform their daily tasks more efficiently. Common and desirable enhancements are concerned with security of data and ease of access to data. For example, improving security by hiding sensitive data in a given context can be achieved in seconds on any form. Ease of access enhancements can greatly improve end-user efficiency by ensuring they can easily and quickly access the data they need without having to navigate all over the application find it. Again, navigational enhancements take mere seconds to implement.

Rapid Risk-Free Application Enhancement is now a reality.

Rapid Application Enhancement for Oracle E-Business Suite

Rapid ROI

Return on investment with CS*Accelerate can literally be measured in days rather than months or years. CS*Accelerate is so productive that ROI can often be achieved with 1 week of implementation.

Figures 2 & 3: Regardless of how many enhancements you create using CS*Accelerate, the cost savings are huge and the timesavings are even more. (For the charts above, a single enhancement is a complex navigational enhancement between a number of forms, each of which may pass and/or return values)

Key Features

CS*Zoom

- Zoom at form, block or field level
- Global Zoom creation
- Multiple Zooms at any level
- Conditional Zooms
- Auto-Query on destination entry
- Auto Push Button
- Close Source on destination entry
- Pass multiple values
- Return multiple values
- Pass/Return values can be SQL based for total flexibility

CS*Action

At block/region level...

- Alter sort sequence
- Alter default query criteria
- Disable insert, updates and deletes
- Display message
- Perform query

At item/field level...

- Change alignment
- Set default value
- Add validation
- Make invisible
- Disable
- Enforce case
- Hint line message
- Next/Previous navigational items

- Set mandatory
- Make protected
- Change button label
- Adjust width/height
- Adjust position
- Switch off prompt/label
- Change prompt/label
- Change item colour
- Set tooltip text

- At window level...
- Change title
- Change width/height

- All CS*Actions can be conditional

CS*Capture

- Easy to use wizard for building CS*Zoom and CS*Action solutions

CS*Flow

- Group CS*Zooms and CS*Actions into a single object for deployment on an end user menu

More...

- Built-in Version Control
- CS*Loader. Transport your solutions via an external file.
- Much more...
