

# **Data Auditing Solution**

CS\*Audit *Standard Edition* for Oracle E-Business Suite provides the user with a suite of simple to use tools that enable the auditing of your corporate data. Within minutes and without any coding or any technical skills you can define your auditing rules to ensure that critical and sensitive data is fully audited so that accountability and integrity is maintained.

### **Ensure Accountability**

Accountability is essential in today's climate of corporate governance and regulation. Businesses need to be able to account for the state of all of their sensitive and critical data at any time. CS\*Audit ensures accountability.

## **Transactional Data Auditing**

CS\*Audit allows you to audit transactional operations on your corporate data. Whether you are auditing specific updates on a single column or auditing all transactions for hundreds of columns then CS\*Audit provides the tools you need.

#### **Database-Wide Auditing**

Auditing is not limited to Oracle E-Business data, you can audit any data that is accessible from within the database.

#### **Structured, Rule Driven Auditing**

Organize your auditing requirements into a hierarchical structure for ease of maintenance and enquiry. Apply auditing rules to ensure you only audit critical transactions.

#### **Fine Grained Auditing**

Audit a single column in exceptional conditions or audit hundreds of columns in all conditions.

You have full control over what is audited and under what conditions. For example, you may only want to audit changes in invoice values if the change is greater than a specific amount.

#### **Detailed and Extensible Auditing**

Not only is the data itself recorded during the audit process, you can specify a whole host of other attributes to be audited such as the Host name and IP address of the user.

These advanced attributes are extensible so adding additional attributes is very simple.

#### **User Friendly Auditing**

No special skills of any kind are needed. Anyone with access to Oracle E-Business Suite can setup his or her auditing solution in minutes.

The user-friendly tools are built into Oracle E-Business Suite with the standard look and feel to make users feel right at home.
