# Data Security Solution E-Business Suite

CS\*Secure for Oracle E-Business Suite is a new breed of data security tool that helps your business secure your corporate data. Within minutes and without any coding or any technical skills you can define your data security policies to ensure that critical and sensitive data is fully secured.

# **Data Protection Assured**

Data protection is essential in today's corporate landscape. Your business must ensure that it adheres to all data protection regulations and legislation. CS\*Secure helps ensure that your data is protected across your business and applications.

# **Complex, Dynamic Security Policies**

Create complex policies that react dynamically according to context in minutes. Apply your policies to the entire application in seconds or single out a specific set of forms, the choice is yours.

# **Zero Application Impact**

Implement your security policies without impacting your application code in any way. CS\*Secure security policies are created transparently at the database level, this ensures that your entire application stays in tact as if nothing had changed. Zero impact, zero maintenance with maximum affectivity.

### **Row Level Security (RLS)**

Dynamically omit entire rows from queries, application-wide in minutes using Row Level Security; for example, secure your sensitive payroll data by ensuring only certain users can view all pay elements.

## **Column Level Security**

Dynamically conceal the data in a particular column based on your own dynamic context using Column Level Security; for example, you may need to conceal the use of particular words in an employee's personal history.

# **User Friendly Security**

No special skills of any kind are needed. Anyone with access to Oracle E-Business Suite can setup his or her security solutions in minutes. The user-friendly tools are built into Oracle E-Business Suite with the standard look and feel to make users feel right at home.
