

DentiMax

The All New Dental Software System

DentiMax is an easy-to-use dental practice management software program that is specifically designed to simplify dental billing for insurance and patients, patient charting, and patient imaging. Its modern design is very intuitive -- which means less time training and more time being productive.

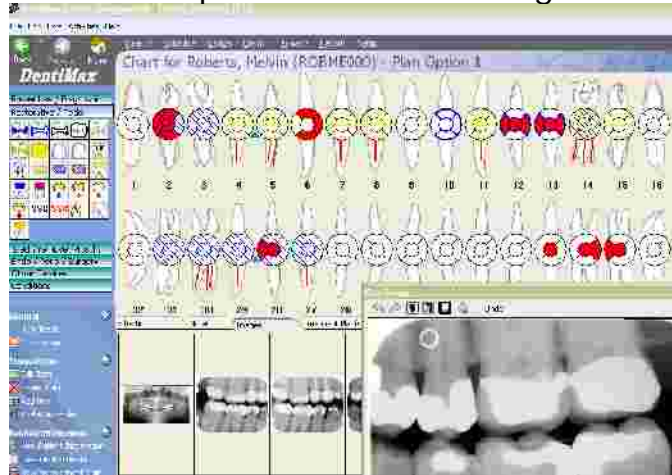

DentiMax includes everything needed to manage a successful practice. Included in the DentiMax Suite is a full patient accounting system for the front office, which manages patient statements, insurance claims, creates aging reports and much more. In addition to the front office, DentiMax Suite includes a full-featured, clinical back office system that will record patient charting information, treatment plans, and

also PSR and perio exams. Loaded with features, DentiMax has everything you need for your practice.

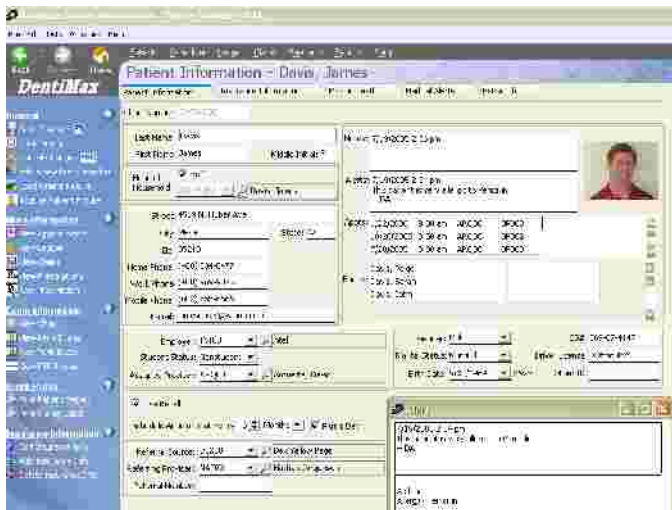

We believe that full-featured, easy-to-use dental practice management software does not need to be so expensive. Nearly every other industry has great software at an affordable price, and it seems unfair that professional software in the dental market is priced so high.

DentiMax Suite is a complete, easy-to-use dental office software program at an amazingly low price. Best of all, there are no required recurring fees. Keeping more money in your pocket is a great way to help your practice become more successful.

Complete Clinical Charting

Increase Profits

Increase the profit of your practice using DentiMax's appointment scheduler. The appointment scheduler allows you to quickly book appointments and easily monitor the amount of scheduled income along with the amount of posted payments and transactions.

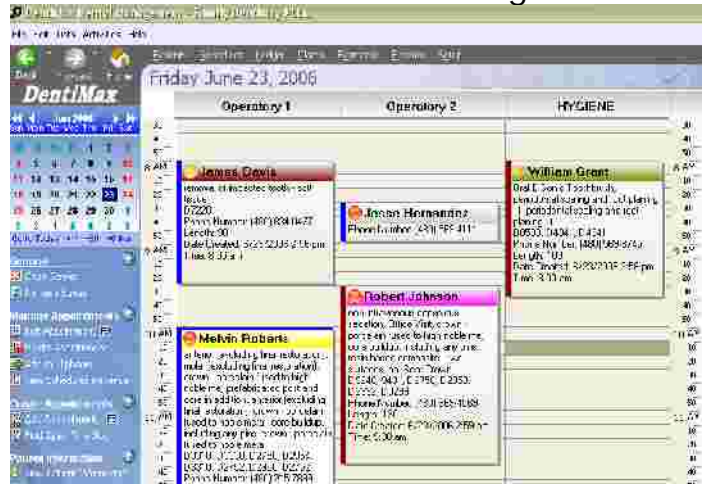

Increase Productivity

Increase productivity with DentiMax's treatment planning. DentiMax allows multiple treatment plans to help patients get exactly what they want, increasing the chance the patients will accept the treatment plan.

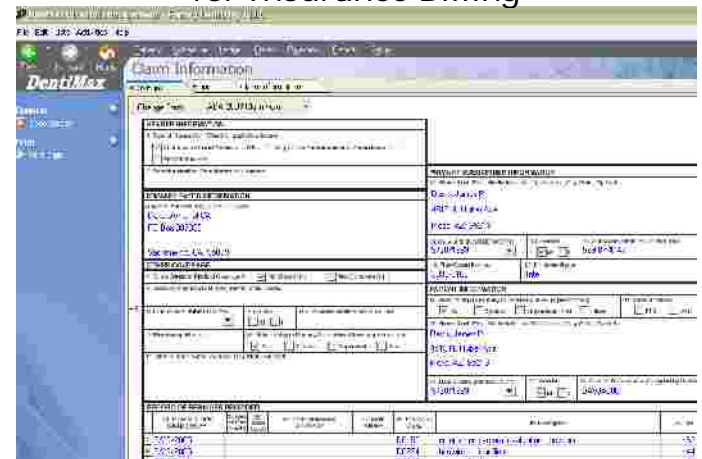

Improve Patient Records

Improve your patient's records by using the clinical features of DentiMax Suite. DentiMax stores and reports clinical information such as patient charting, perio exams, and PSR exams.
