

Press Release
from CRL Sweden

Kalmar, Sweden 2009-02-02

CRL Sweden awarded with the Kalmar Science park Award for its excellent expansion and development in 2008

CRL Sweden was awarded with Kalmar Science park Award as the Most Promising Growth Company - 2008 at the prestigious gala event, "Guldfesten 2009". At the same ceremony, CRL Sweden's management team was nominated as one of top three entrepreneurs in Kalmar all categories - 2008.

"Our strong belief is that we are moving forward in the right direction. We intend to launch new products in the near term addressing the Wireless Sensor Network market which will lead to our further expansion internationally. We had a spectacular 2008 and are extremely happy to be recognized for the team's hard work", says CEO, Mr. Björn Karlsson.

CRL Sweden was early last year also awarded "Metro Tech Challenge 2008" with a special mark of honor from the US Ambassador to Sweden, Michael Woods, as one of the most promising Hi-Tech companies.

"Our acquisition by Exensor earlier last year has given us the strength and support to aggressively expand our R&D and sales efforts. Increasingly we are being recognized for our competitive strength and sustainability", states VP Global Sales, Mr. Mats Nilsson.

About CRL Sweden

CRL Sweden is a global leader in the development of OEM software platforms and services for Wireless Communications with Mesh Technology combined with expertise in system development, customization and integration. CRL Sweden offers customer optimized communication software platforms for wireless networking with services for custom-made development and integration of networking applications including urban broadband networks, Telematics, Logistics, Mining, Heavy industry environments, and Telemetry amongst the others.

CRL Sweden began its journey in 2004 as an incubator of Kalmar Science Park at Kalmar. Today it possesses a world leading mesh software development research team with a full portfolio of high-end mesh drivers and firmware. In April 2008, CRL was recognised as one of the four of Sweden's most promising new technology companies in "Metro Tech Challenge", a tough and eminent competition.
