

ULTIMATE DIVOT SIMULATOR

Best Performing Golf Mat For Driving Ranges Golf Courses and Country Clubs

- Golfers no longer have to settle for static range mats that don't react the same way grass does.
- The patented design has a sliding turf tray that allows golfers to hit down-and-through and compress the ball, accurately simulating ball flight and the feel of carving out a divot after striking the ball.
- FairwayPro is the closest thing to hitting off fairway ever developed while providing the most forgiving surface, reducing the punishment from fat shots.
- Best choice for discriminating golfers who want true feedback while practicing on artificial turf.
- Endorsed by GOLF® Magazine Top 100 Golf Teachers.
- Great for shaping shots and short game

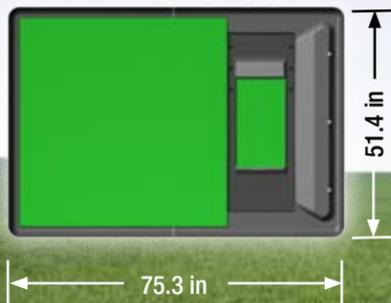

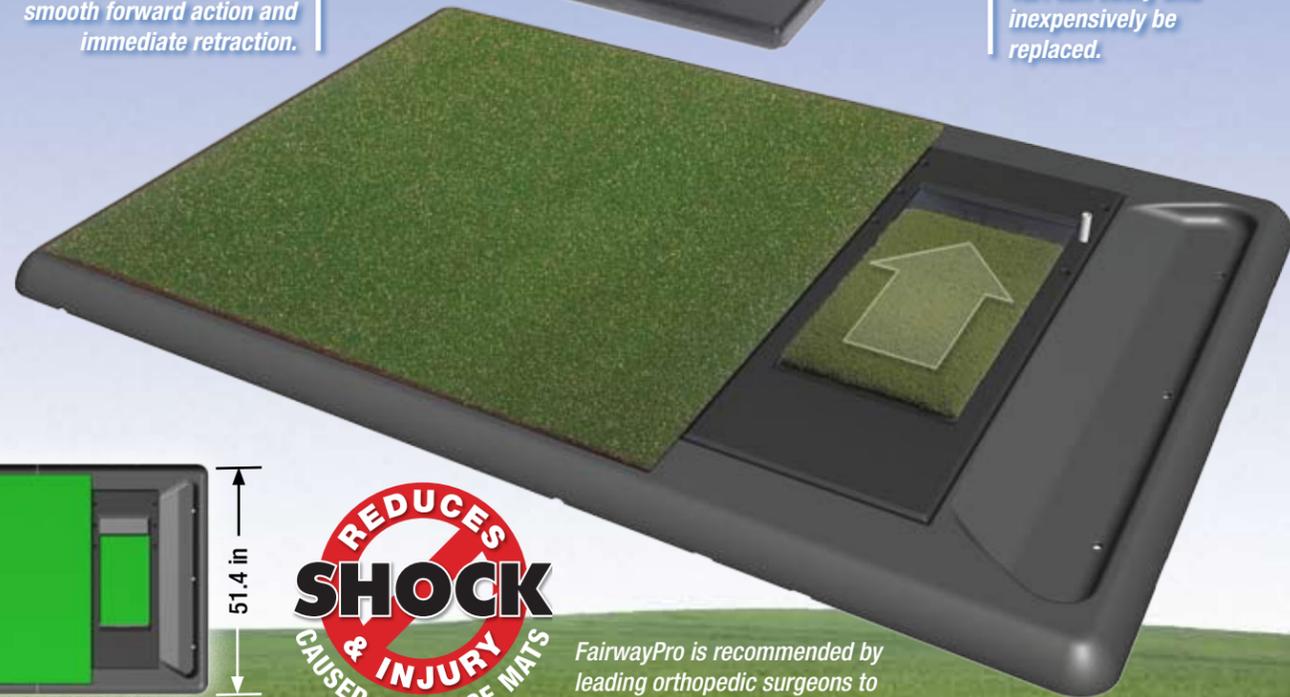

Sliding Turf Tray Assembly

Turf tray/spring chassis is a single integrated unit and can be removed with security key from base for maintenance or reconfiguration for left-handed golfers.

Rugged spring chassis features stainless-steel compression springs for smooth forward action and immediate retraction.

Because the turf tray slides forward, the turf is subject to much less wear and tear as it does not take the brunt of the club impact. Turf can easily and inexpensively be replaced.

FairwayPro is recommended by leading orthopedic surgeons to reduce joint stress.

ULTIMATE PORTABLE DIVOT SIMULATOR

Take it to the driving range, or use it at home.

**TAKE CONTROL
WHEREVER
YOU PRACTICE**

Panel folds under range mat for added stability

FairwayPro is manufactured with the finest materials, including high-strength aircraft aluminum, for lightweight and strength

Handle and panel assembly is detachable and can be reversed for left-handed golfers

FairwayPro gives truer feedback on your golf shots. With range mats, when you hit behind the ball, the club may still bounce off the hard surface into the ball, and the ball takes off as if you've executed a good hit. With FairwayPro, you'll know if you've hit behind the ball because the impact will cause the turf tray to start sliding forward and the club head will hit the ball with much less force. The ball flight will be affected when you hit a bad shot on FairwayPro, as it would on real grass.

Golf is a game that is played on grass. That's why FairwayPro is engineered to enable golfers to hit down-and-through, as on natural turf, while practicing at the driving range or at home. It's a brand-new way to practice golf, and you just might find it as enjoyable as playing a round of golf!

U.S. patents 6,994,634 and 7,384,346. Other U.S. and international patents pending.
