HealthSaaS.net Service

The HealthSaaS.net PHR is web based Software as a Service (SaaS) application that enables patients to record multi-conditions/multi-doctors, pain locations, pain types, pain intensity, medications, naturopathic remedies, sleep patterns, treatments, therapies, exercise, activities, additional symptoms, and quality of life concerns.

The HealthSaaS.net PHR facilitates better communication between patients and their healthcare providers through account file sharing or secure Provider Portals. Patient driven report data will help providers identify both effective and ineffective treatments and medications. Healthcare providers may then make treatment and medication modifications to improve efficacy and provide patient-members with a more consistent and improved quality of life.

Private Portals give clinicians a secure and easy way to access patient data and reports. Our meaningful use tools assist in monitoring and modifying treatment regimens and can help improve efficacy of treatment.

HealthSaaS.net also offers fee based services to support clinical trials and research studies.

Fee based analytics services are available to help clinicians, researchers, pharmaceuticals companies and payors improve efficiencies.
