Helping people monitor their health

Technologies **EPIC**
Electro-Physiologically Interactive Computing

Framework **UFIT®**
Online automated system for health monitoring

Products **UFIT® TEN-10**
Blood pressure monitor with computer controls

Services **UFIT® SMART**
Self-Monitoring, Analysis, Reporting & Testing
hypertension, heart disease, diabetes, etc.

Pipeline **UFIT® TEN-20**
Automated blood pressure & blood glucose monitor
Noninvasive, standardized, data quality controlled

UFIT® CHARM
Cardio-Hemodynamic Adverse Response Monitoring
adverse reactions to drugs, food, exercise

Online Health Monitoring getting the numbers right

EPIC TECHNOLOGY

Everything in health care revolves around the human body. In turn, everything in the body depends on blood flow, making the pulse the richest source of objective health information.

UFIT® integrates computing and Internet technologies into an online system for health monitoring.

Electro-Physiologically Interactive Computing (EPIC) technologies are employed to make computers sense and respond to clinically relevant conditions of the cardio-hemodynamic system.

The Internet provides interactivity, speed, anonymity, low distribution cost, and global reach.

SMART SOLUTIONS

The magnitude of adverse events and errors in health care is much higher than in other industries yet health product consumers cannot evaluate and manage their health risks and quality of care.

But now there's a way to alert one about certain types of adverse events.

It's called Self-Monitoring, Analysis, Reporting & Testing (S.M.A.R.T.) – an EPIC-enabled service that's become smarter due to recent advances in science and technology.

Biosign is committed to make it available online, worldwide, to all consumers of health products.

UFIT® CARE

Biosign EPIC technology for raising the Clinical Awareness, Readiness & Effectiveness of health product consumers.

Contact: ufit@biosign.com

UFIT® CHARM

Biosign SMART solution for monitoring adverse events and evaluating cardiovascular risk factors.

noninvasive, integrated, automated...

Safe, Simple, Fast one device, one click, one minute

UFIT® HARDWARE

Portable electronic unit captures the pulse through an inflatable cuff wrapped around the wrist.

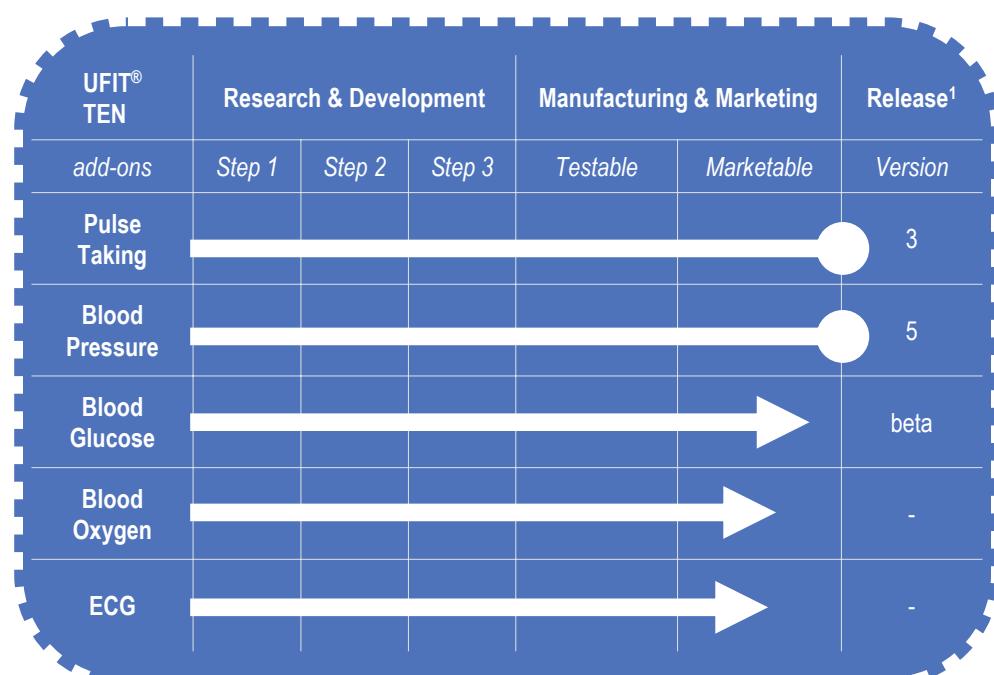

The device is powered by the user's computer and controlled by Biosign web servers over ordinary Internet connections.

{ services may be customized
capabilities may be added or multiplied
updated and upgraded
– without any hardware changes – }

UFIT® SOFTWARE

Fully integrated Internet system provides instruments, operators, and utilities such as:

- Meters & Monitors
- Minders & Mentors
- Reporters & Testers
- Schedulers & Alerters

[1] Availability depends on the laws governing self-care in the user's country of residence.
