FOR IMMEDIATE RELEASE

**Diodes Incorporated (“Diodes”) implements product costing solution from Enterprise Performance Solutions, Inc. (“EPS”)**

EPS, the leading provider of cost management solutions to the semiconductor industry, and Diodes, the leading global manufacturer and supplier of high-quality, application-specific standard products within the broad discrete and analog semiconductor markets, serving the consumer electronics, computing, communications, industrial and automotive markets, jointly announce the successful implementation of the EPS Product Cost Management system.

The delivered solution allows Diodes to easily model operational product cost and legal transfer prices based on bill of material, pricing, and product design specifications. Diodes can with the delivered solution perform cost simulations and cost comparisons between items, versions of bill of materials, months, quarters, and 'best case' and 'worst case' scenarios. Also, Diodes can with the new solution easily benchmark the actual production cost per plant compared to the operational product cost and calculate cost variances.

The delivered solution performs computations of key design parameters like theoretical gross die per wafer according to a company specific formula. For example the system is configured to automatically switch between theoretical and actual gross die per wafer for new items that move from the design stage into production.

*“We decided to implement the EPS Product Cost Management solution to make our costing process both more efficient and transparent.”* says Rick White, CFO, Diodes Incorporated. *“A major reason we selected the EPS system was its ease of use and that it was flexible enough to fit our business without customizations.”*

*“Diodes relied on offline tools to manage their operational product costing which was an enormous task.”* says Fredric Karlsson, President of Enterprise Performance Solutions. *“With our solution Diodes has one system, one method and one source of the truth for their product cost for all plants worldwide. We expect that Diodes will see large efficiency gains with the new solution.”*

EPS Product Cost Management is part of the EPS Cost Management Suite. A comprehensive cost management solution for complex and process manufacturing industries.

**Diodes Incorporated** (Nasdaq: DIOD), a Standard and Poor's SmallCap 600 and Russell 3000 Index company, is a leading global manufacturer and supplier of high-quality application specific standard products within the broad discrete and analog semiconductor markets, serving the consumer electronics, computing, communications, industrial and automotive markets. Diodes' products include diodes, rectifiers, transistors, MOSFETs, protection devices, functional specific arrays, amplifiers and comparators, Hall-effect sensors and temperature sensors, power management devices including LED drivers, DC-DC switching regulators, linear voltage regulators and voltage references along with special function devices including USB power switch, load switch, voltage supervisor and motor controllers. The Company's corporate headquarters and logistics office are located in Dallas, Texas. A sales, marketing and engineering office is located in Westlake Village, California. Design centers are located in Dallas; San Jose, California; Taipei, Taiwan; Manchester, England and Neuhaus, Germany. The Company's wafer fabrication facilities are located in Kansas City, Missouri and Manchester; with two manufacturing facilities located in Shanghai, China, another in Neuhaus, and a joint venture facility located in Chengdu, China. Additional engineering, sales, warehouse and logistics offices are located in Taipei; Hong Kong; Manchester and Munich, Germany, with support offices located throughout the world.

**Enterprise Performance Solutions (“EPS”)** is a leading provider of cost management and profitability analysis solutions to large international process manufacturers. Headquartered in Atlanta, Georgia, the company was founded by leading experts in the cost management field with one mission – to provide clients with the most flexible, comprehensive and innovative software solutions, enabling them to more effectively manage costs and increase profitability.
