Why We're Better

- **Producing truck friendly routing for the entire route** avoiding low bridges, commercially restricted areas, and more. The TeleType WorldNav devices evaluate the entire route and produce a suitable route taking into account low bridges, weight restrictions, and Hazmat levels. In addition, the WorldNav GPS will avoid tunnels and parkways when appropriate. Other products simply flash a warning message regarding a low bridge – by then it might be too late and the driver is forced to back up (or worse). Using WorldNav you'll **"Know before you go!"**
- **Sleek High Resolution Large Screen.** This high resolution touch screen GPS allows you to see more roads and details than older systems. The WorldNav GPS features a slim contemporary style and advanced navigation features such as Lane Assist and Smart Search Technology™, and includes 12 million points of interest and maps of North America and Mexico, with a choice of spoken instructions and menus in English, Spanish, or French.
- **Economical and Practical.** WorldNav offers typical savings of 30% over competitive systems. The contemporary look of the WorldNav GPS complements the interior of the vehicle and does double duty as a car GPS when the truck is not in use.
- **Ability to enter any size and weight and have the map visibly change.** Over dimensional, small trucks, and 18 wheelers are all supported. Maps and routing adjust to support each vehicle type.
- **Visible differences on the map showing truck restricted areas in bright pink.** If interested, the driver can click on the restricted road and information will be displayed regarding the reason for the restriction, no guessing. TeleType developed the technology that allows the map to visibly change based on restrictions and has pending patents on this implementation.
- **Easy Updating and Upgrading.** Ability to easily update the software and maps by memory card or downloaded via internet. Updates can be purchased directly through TeleType.
- **Bluetooth and FM.** Includes Bluetooth for hands free cell phone use, and an FM Transmitter allowing you to hear the voice instructions loud and clear through your radio if desired.
- **Entertainment functions.** Movie, picture, and music player functions are included on the GPS.
- **Finds addresses that competitor systems are unable to locate.** The TeleType Smart Search Technology™ overcomes the challenge of locating addresses that may be specified incorrectly or are complicated (such as those with prefixes and suffixes, SW, E)
- **Extensive Points of Interest database.** Easily locate truck stops (by brand if desired), fuel stops, rest areas, CAT scale locations, businesses, and more. A unique telephone number search allows businesses to be found without the need for an address.
- **Intelligent re-route.** Drivers can select detour (avoid 1, 3, or 5 miles ahead, back to original route) or take advantage of flexible routing options such as changing to "avoid freeways".
- **Expansion serial port.** Optional accessories for this unique port include Traffic Antenna for unlimited use of Traffic Incident Reporting, Tire Pressure Monitor Gauges, and Live Tracking and Messaging so that with your permission, friends and family can track your trip in real-time, and you can send and receive messages from your dispatcher.*
- **Outstanding live customer service.** We are proud of our in-house staff of exceptional service technicians. No other truck navigation company offers the level of customer support that TeleType provides. Agents are available via toll free phone 1-800-717-4478, Monday-Friday, 8 am to 6 pm, and Saturday, 12-5 pm EST. Please visit www.teletype.com/worldnav/support for additional pre-sales, and post-sales information.

* Accessories sold separately and require version 11 or higher of the WorldNav software.
