### Misdiagnosis: A Practicing Physician's Case Study in Health Care Reform

- ✓ The CBO says when you look at the numbers from 2014 to 2024, the total expense is much greater at \$2.5 trillion. There is a significant difference between \$938 billion and \$2.5 trillion – two and a half times more!
- ✓ 73% of Doctors say they practiced some form of defensive medicine in the past twelve months to protect themselves from frivolous lawsuits. Jackson Health Care estimates that \$650 billion of the \$2.5 trillion spent on health care per year was spent on unnecessary tests due to physicians practicing defensive medicine.
- ✓ Did you know that the new health care reform law grants 1,968 powers to the HHS Secretary? That's right, 1,968 powers.
- ✓ In 1979, there were 252 state mandates in place across the entire country, an average of five requirements per state. By 2009, there were a total of 2133 state mandates, or an average of 42 per state.

.....And Much More

- According to the Bureau of Labor Statistics, Americans spent 5.9% of their household budgets on health care in 2008. They spent 12.8 % on food, 17 % on gasoline and transportation, and 33.9 % on housing. It's true, American's spend more on health care than citizens of other countries, but we demand to get better health care.
- The American College of Physicians (ACP) reported in a recent peer reviewed study there will be an estimated shortage of 35,000 to 44,000 primary care physicians for adults by 2025. The AAMC says the country could face a shortage of as many as 150,000 doctors by 2025.

#### Dr. Kipp Van Camp

An interventional radiologist and former family practitioner, Dr. Van Camp is triple board certified. His extensive formal education includes medical training with two residencies and a fellowship covering a span of nine years of post-graduate education.

Dr. Van Camp began his medical career practicing family medicine in Weston, Missouri, doing everything that family practitioners do, from delivering babies to pediatrics to elder care. Soon after, he completed a residency in diagnostic radiology at Oklahoma State University in Tulsa, followed by a fellowship in interventional radiology at Washington Hospital Center in Washington, DC.

His extensive life experiences combined with a constant study of and research on topics of interest have given Dr. Van Camp the knowledge and insight to address a wide variety of health-related topics. An accomplished presenter with a relaxed yet thought-provoking approach, Dr. Van Camp has been a sought-after public speaker since 1999.
