Golf Car Solar to introduce new zero cost thin film solar golf cart kit at 2012 PGA Show in Orlando.

(SARASOTA, FL) Golf Cart Solar, a Sarasota, Florida based solar technology company announced today a new golf cart solar panel program that delivers solar panels for golf carts at no cost to the end user customer.

“In addition to the obvious demand by golf courses and golfers to go green, technological advances, government incentives and increased competition has driven down the cost of solar cells, resulting in this new breakthrough pricing program” said Doug Fyvolent, partner in Golf Cart Solar.

Golf courses could save up to 20% or more on electrical costs associated with charging golf cart batteries. This savings reduces one of the major expenses incurred by golf courses.

Golf Cart Solar’s program includes both new and used aftermarket kits, as well as an original equipment manufacturer (OEM) program so the leading golf cart manufacturers can install the system inline during the manufacturing process.

The Program is available to golf courses that either buy or lease. “We have had extensive conversations with the leading cart leasing companies and they understand what we are doing and if they qualify can include this kit in their leasing programs” said Fyvolent.

The kit includes a new technology thin film solar panels, controller and wiring harness. Golf Cart Solar can also do the installation for the end users.

Golf Cart Solar unveiling the new program at the PGA Show, Orlando, FL January 26-28, 2012.

About Golf Cart Solar

Golf Cart Solar is is partnering with Solar Direct, a 25-year-old solar technology company based in Sarasota, FL. Since 1986, Solar Direct has completed thousands of residential and commercial solar projects from golf carts to large scale PV installations
