3,500 TONNES OF CO2 SAVED IN 2012.

Enviro Petroleum announced that 3,500 tons of CO2 were saved in 2012 by injecting Enviro Plus® to fuels.

The liquid combustion catalyst, used around the world to reduce emissions, have reduced CO2 emissions from automobiles, boats and power plants

ORLANDO FL, JANUARY 17, 2010: **ENVIRO PETROLEUM** announced today that conservative estimates by them suggest that more than 7.7 million pounds or 3,500 tons of CO2 have been saved to the world by using Enviro Plus technology a. This is equivalent to converting 500 cars to full electric (each cars emit 15,000 pounds per year).

"Our success in deploying this technology is such that we expect to be worldwide by the end of this year. Most companies embrace our offer almost immediately: reduce fuel consumption by 10% or more and saving one pound of CO2 per treated gallon. This is just too powerful to ignore." These was the statement of Wichy Castro, CEO for **ENVIRO**.

What about trading these credits?

Mr. Castro also commented about their progress with validating their technology: "We already started the process towards getting Enviro Plus certified as a valid carbon sequestration technology. It is expected that we finish the process by the end of 2013. In the meantime, we are tracking the CO2 reduction in real time with ECO-P™, a web-based platform that monitors CO2 emissions reduction in real time. The credits for CO2 emissions reduction can be traded retroactively to the date the emissions reduction started. With ECO-P our customers know what their environmental contribution is in real time and can also advertise on it for gaining the positive media attention their environmental initiative deserves."

A vertical advertisement graphic with a blue background. At the top is the Enviro Plus logo, which consists of a large green 'E' and a white cloud with a blue plus sign inside, followed by the word 'NVIRO' in green. Below the logo is the text 'BETTER FUEL,CLEANER AIR'. In the center, a white text box contains the message: 'A safe, proven, inexpensive way to save on fuel and reduce emissions'. The bottom half of the graphic features a collage of images: a white commercial airplane flying, a large blue cargo ship, a white semi-truck, and industrial smokestacks emitting smoke. At the very bottom, the website 'GOENVIROPLUS.COM' is written in white capital letters.
