ALLOWING NAVIGATORS TO FOCUS ON PATIENTS, NOT SCHEDULES

Improving the quality of care:

- Quality indicators from leading organizations, including NCBC, incorporated into database
- Quality checks ensure data completeness and integrity
- Centers can evaluate quality compliance on both facility and physician level
- Concurrent quality compliance monitoring provides immediate impact on patient care

Patient Management Services include:

- Comprehensive patient demographics, including patients at increased risk
- Detailed information related to screening, diagnosis, and treatment
- Cancer conference presentation information
- Long-term follow-up and survival information
- Unlimited custom fields to meet facility specific needs

Automated Data Entry

Save time and reduce errors related to manual data entry with Interface Manager module. It allows you to import patient demographics on new cases as well as update patients already included in the database. It also imports data from various sources including mammography systems.

Survivorship

Codified, event-based application that provides detailed chronological documentation of:

- Patient contact
- Tests and treatments
- Administrative processes
- Adverse late effects

Integration with Cancer Registry

NAACCR formatted file allows data to be exported to cancer registry for case identification and imported from the cancer registry for long-term follow-up.

Unrivaled Reporting Including:

- Impressive standard reports
- User friendly ad hoc report creation

“NextPath’s ability to integrate with existing hospital information systems makes capturing the patient data we need incredibly easy”

ONCONAV
