

## Rentricity Participates in HydroVision International 2013

July 23, 2013

Al Spinell, Rentricity Co-Founder and Advisor, will participate at the Hydrovision International Conference & Exhibition in Denver, Colorado. The event will take place at the Colorado Convention Center from July 23 – 26. Mr. Spinell will present on July 26<sup>th</sup> during the conference special session on New Technology. The presentation will highlight Rentricity's energy recovery systems and give in-depth information on the Company's partnership with the City of Keene, New Hampshire's water treatment facility. In 2011, the City of Keene commissioned Rentricity to install two energy recovery systems, which eventually led it to be the first fully energy-independent water treatment facility in America.

*About Rentricity: Based in New York City, Rentricity Inc. is a renewable energy company that uses unique energy recovery configurations to transform untapped energy within various man-made water, wastewater and industrial infrastructure into electricity. The energy recovery systems convert excess pressure in water mains and conduits into clean, electric power. Since this electricity can be sold onto the grid, Rentricity provides its customers with an additional source of revenue and a way to offset rising electricity rates while supporting local renewable energy goals.
