

For Immediate Release

Homecare Homebase and SutureSign Interface to Launch January 2014

Birmingham, AL (10/31/2013) Suture Health, Inc., provider of SutureSign, healthcare's leading electronic signature network, announced today that an interface with Homecare Homebase, homecare's leading automation software provider, is expected to be available in January 2014. The technology partnership will enable seamless outbound and inbound document delivery, which is expected to greatly simplify the costly task of care order processing and improve agency compliance with the Home Health Face-to-Face requirement.

Designed as a common platform, SutureSign's web-based service is a network where all doctors and agencies work together – maximizing adoption, profitability and compliance. It automates manual workflow processes and efficiently tracks the status of communications; significantly reducing the time it takes to obtain completed documentation from referring physicians. It leverages unique clinical workflows that are familiar to physicians while enabling them to capture their signature-related revenue, and it boasts the only Medicare-reviewed Home Health Face-to-Face tool. SutureSign eliminates order resubmissions, shortens the billing cycle, provides and assists clients with a proven physician recruitment strategy, manages the physician help desk, and even reaches out to potential "slow signers".

"SutureSign is more than a product", says Suture Health CEO and co-founder, Michael Blackstone, MD, "it is a service wrapped around technology that provides significant value to our clients. We are extremely pleased that Homecare Homebase, one of the most innovative homecare software providers, sees value in what we provide to the Home Health industry. We share similar views that care is about the patient, not the paperwork, and we look forward to providing that experience to our common clients and their referral sources."

The interface will provide seamless sending of home health care plans, orders and Face-to-Face requests from Homecare Homebase to physicians on the network. Once completed by physicians and their staff, the documents will be automatically sent to and processed through Homecare Homebase – closing the loop and automating the entire care order process.

"Homecare Homebase has chosen to interface with SutureSign to further enhance our customer's ability work seamlessly with referring physicians and provide tools that physicians will prefer," said Tom Maxwell, Chief Strategy Officer at Homecare Homebase. "This unique integration will allow physicians to easily sign orders from a variety of providers without worrying with several systems and sign-ons to complete these required tasks. This not only ensures the necessary documentation requirement is completed, but that patients are getting timely, well-organized care. The SutureSign integration enables an added level of flexibility to our users and their referral sources and additional interoperability into the healthcare community."

About HomeCare Homebase, Inc.

Homecare Homebase, based in Dallas, Texas, is a leading healthcare software company serving the technology needs of the fast growing post acute care industry including homecare, hospice and private duty. Homecare Homebase has received the prestigious Best In KLAS for Homecare award for three consecutive years in the "Best in KLAS Awards: Software & Services" report. Homecare Homebase offers a comprehensive integrated web-based software solution to improve the clinical, operational and financial success of homecare and hospice agencies. Homecare Homebase enables real-time, wireless information exchange and communication between office staff, field staff and physicians; automates workflow processes; enables accurate billing through numerous integrated checks and balances; and provides powerful management reporting via a back-office data analysis tool that ties together all agency operational information. Founded by industry veterans in 1999, every aspect of the Homecare Homebase system was developed to be user-friendly, flexible and customizable to specific agency needs. About Suture Health, Inc.

Established in 2009 by physicians, Suture Health is an innovative health information technology provider. As sutures repair a wound, Suture Health aims to mend healthcare's fractured communication system through SutureCONNECT, its web-based provider network. Leveraging this network, it currently provides SutureSign, healthcare's leading electronic signature solution, but is working to solve many of the inter-provider communication problems experienced by today's clinicians with the exchange of actionable clinical data.
