WORLD ACTIVATED CARBON  
ASSESSMENT, OPPORTUNITIES & FORECAST UPTO 2018

### Activated Carbon Annualized Sales Volumes Will Cross 2400 Thousand Tons Mark by 2018 Projects Tech Archival In A New Report

Activated carbon is well renowned for its exceptional adsorption properties which finds application in diversified group of industries as well as in other non-industrial establishments across the globe. It is widely used as a specialty chemical for water treatment and air purification purposes including applications in water purification systems, automobiles, food & beverages, pharmaceutical and other industries.

Except purification, the product is immensely required for mining of precious metals i.e. gold, gas processing, gas storage and delivery, as catalyst for chemical reactions and many other practices. Moreover, there are a number of other potential applications which enhance the significance of

activated carbon as a versatile industrial chemical.

Due to increased worldwide concern on rising environment pollution, governments are confronting some adverse effects in terms of water and air contamination. This has created a huge market for certain products and systems which can act as safeguards to counter these problems. Activated carbon has been extremely successful as a remediation solution to counter the problem of air and water purification through its excellent adsorbent properties. Furthermore, activated carbon offers numerous other product related advantages which have created a myriad of oppor-

tunities for players to seek options in new potential markets with new applications.

'World Activated Carbon: Assessment, Opportunities & Forecast Up to 2018' explores that total installed capacity for activated carbon reached more than 2000 thousand tons in 2013. Accordingly, the production and sales volumes are also anticipated to grow exponentially at a CAGR of nearly 10% by 2018.

Tech Archival analysts further project that demand for activated carbon will continue growing well right through 2018 when total annualized sales volumes will cross 2400 thousand tons mark in 2018.

## WHY YOU SHOULD BUY THIS REPORT

✓ Stay one step ahead with the best quality & timely information up-to previous year end (Dec, 2013) published in 2014.

✓ Save your precious time as you can discover complete insights including market value, market volume, market share, CAGR, market dynamics, trends & developments, threats & opportunities, competitive landscape, economic

and company profiles and more, all aggregated & explored in one document.

✓ Find out exclusive historic and forecast statistics from 2008 to 2018 clearly presented in a long list of charts, graphs and tables that helps you draw conclusions with ease.

✓ Take prints for your employees or include report content as reference in presentations, reports, marketing mix and many more.

In addition, you can also keep the report in your tablet or smartphone so that you

For any additional questions, contact our orders team at [orders@techarchival.com](mailto:orders@techarchival.com).

## WHO WE ARE

Tech Archival is a global market and industry intelligence company engaged in the business of publishing premium research studies and offering bespoke research solutions. Our obsession for quality and precision combined with our advanced research expertise and focused approach helps us to cultivate superior insights for our global clients faster and more cost-effectively that help reach their strategic and operational objectives.

## OUR APPROACH TO RESEARCH

Every day at Tech Archival, we give serious focus to maintain research ethics and integrity for research excellence. Our analytics & research centres are fully equipped to conduct world class market/industry research studies and offer custom research solutions. We aim to bring quality, precision and authenticity in every solution we offer.

To achieve these goals, we have specialized Data Development Team, Analyst Team and Editorial Team, all joining their efforts to deliver premium research solutions. Our experienced researchers in Data Development Team possess strong primary & secondary research skills and use proprietary frameworks for collecting data through extensive interviews, surveys and other wide-ranging secondary research techniques.

The information thus garnered is forwarded to our analyst teams who have exceptional analytical capabilities and rich industry experience to perform refined analysis and synthesize information. Finally, our editorial team carefully reviews the compiled report, performs quality checks to meet specified standards and blends it into our flagship research studies.

## OUR METHODOLOGY

Tech Archival research studies draw on extensive primary and secondary research, all aggregated, analyzed, cross-checked and presented in a consistent and accessible style to enable decision making.

Tech Archival prepares and maintains in-house databases of various market and industry related information which is created using in-depth interviews, surveys with key stakeholders followed by rigorous analysis using highly specialized modeling & forecasting tools. We also maintain extensive in-house databases of news, analyst views, company profiles, country profiles, macro-economic profiles which facilitate our researchers to offer accurate assessments and forecasts.

Our extensive secondary research activities equip us to stay up-to-date with the latest industry events, trends and developments. Our researchers aggregate and analyze a number of secondary information sources including national/governmental statistics, official international sources, trade associations, stock exchange and broker reports, company annual reports, business information libraries and databases, among many more.

Finally, all quality information is analyzed using efficient analytical tools to create genuine market insights and forecasts, which can then be refined according to specific competitive, regulatory and demand-related factors. This followed by our continuous and stringent quality checks ensures that our studies remain focused, accurate and up-to-date.
