

Quark is *Money Reinvented* - Join Quark as we evolve the digital payment process!

Quark evolves the electronic payment process with two key features - it is *Faster* and more *Secure* than Bitcoin!

By now you may have heard of bitcoin - it is an electronic store of value that is limited in quantity, and is able to be used as a mean of electronic payment.

Quark is a digital payment system based on the Bitcoin code, but with key upgrades in its technology. These innovations will allow it to serve its users needs in a rapidly emerging marketplace that uses digital money or "cryptocurrency".

Digital money is revolutionizing money transfer - in the same way that e-mail revolutionized the way we communicate. Digital money allows us to pay worldwide in a safe and secure manner with minimal fees and without a need for a currency exchange. Importantly, Quark and other digital money is being rapidly adopted into online stores, and will be soon available in traditional stores through payment providers like Moolah (<https://moolah.io/>).

Quark transfers in a blink and is safe by its technical design:

Faster -

The Quark network can create payment confirmations starting within 30s; by comparison, the bitcoin network takes approximately 10 minutes to create its first payment transfer confirmation.

Secure -

Quark builds on bitcoins' already robust security by taking its base encryption algorithm and adds 9 rounds of encryption.¹

Finally - Quark has a strong foundation in its tremendously dedicated and skilled community. Quark has many exciting initiatives, including:

- 1) The Quark Foundation provides strong leadership, organization and support for numerous community initiatives and has been the source of many key pieces of Quark infrastructure, including an auto-mining wallet designed to secure Quark's digital transfer record, its blockchain.
- 2) Quark Labs provide professional quality marketing tools and tutorial videos to aid users in participating in the Quark community.

Find out more, watch our promotional video and download wallet software for PC, Mac and Android Phone (now on Google Play!) at our homepage at www.qrk.cc.

Join the digital revolution with Quark - Money Reinvented.

¹ Quarks' additional encryption include 6 rounds from groundbreaking algorithms including Blake, Blue Midnight Wish, Grøstl, JH, Keccak and Skein and it then adds 3 more rounds of encryption using these at random.
