## CRAZY DIAMOND PERFORMANCE NOW OFFERING DEDICATED CNG VEHICLE AND REFUELING PACKAGE.

Shelby Township, Michigan, January 15, 2015– Crazy Diamond Performance Inc. (CDP) is pleased to offer BRC FuelMaker® technology, packaged with its Advanced Compressed Natural Gas (CNG) vehicle retro-fit systems.

*CDP is now offering BRC FuelMaker® residential and commercial fueling products, when ordered in conjunction with its advanced dedicated CNG vehicle retro-fit systems. CDP is offering a package of an EPA certified 2015 CNG Cruze® LS and a BRC FuelMaker® Phill® refueling compressor for \$27,559.00<sup>1</sup>, for a limited time. Kevin Fern (President CDP) states that “We are very excited to be the first Small Volume Manufacturer to offer an EPA certified vehicle, retro-fit, and refueling station in one step. One of CDP’s priorities is to see the rapid and widespread adoption of CNG vehicles, both for fleets and for individuals. Offering the vehicle, retro-fit and fuel appliance at the same time reduces costs and complexity while ordering. This makes the decision much easier for fleets who are concerned about purchasing and using a dedicated CNG vehicle, in locations where CNG fueling isn’t readily available. CDP’s advanced CNG vehicle technology is far beyond what is considered the current state of the art in aftermarket fuel systems. Kevin Fern “Our CNG fuel systems are engineered to a higher grade, gaining from past OEM design and testing experience. CDP recalibrates the Original Equipment Manufacturer (OEM) Engine Control module (ECM) for CNG operation. CDP’s integrated diagnostics module, monitors and reports for failures and/or leaks of the CNG fuel system through the OEM ECM”. CDP has a combined 35 years of alternative fuel vehicle engineering and retro-fit experience. A 2015 Dedicated CNG Chevrolet Trax® is coming soon from CDP.*
