Maximizing use, utilization & tracking of assets and driving rental revenue with additional services

Our rental turnover in first 9 months of 2014 has increased by 21% with same number of people!
Ton Kraak, Dieseko Group

Rental companies are increasingly investing in information technology to streamline and control their processes and deliver a better, faster service to customers.

Rental companies play a crucial role in nearly all supply chains. By responding promptly and flexibly to customer needs, rental companies are able to provide temporary solutions that contribute qualitatively to the success of its clients.

The right financial and operational software, designed to meet the specific requirements of the rental industry, will help ensure that companies can meet their obligations and achieve a real competitive advantage.

Dynamics Rental has been developed based on best practices from the rental industry to enable you to have a better grip on your business and achieve your and your customer's ambitions.

BENEFITS

- Once-only input and consistent data for rental/sales, administration, logistics and finance
- Improve efficiency and understanding by combining all business information in a single database
- Simple transfer of inventory assets to rental assets

Dynamics Rental offers a suite of proven solutions and premier services for both bulk and equipment rental.

Products

Rental Management

is a strong rental solution that gives companies a clear view of all current operational information in real time, enabling optimum performance. It supports the full range of rental activities, for example administration, registration and management, as well as potential sales activities.

Service Management

supports your service organization featuring: complaints and warranty, repairs and periodic maintenance. At the same time you have direct access to all the data you need regarding the service objects, resources, contract and logistics.

Mobile Service Management

is an online solution based on a mobile platform that enables enterprises to optimize the operations of maintenance personnel through a unique integration of Mobile Workforce Automation and a rich Service Management solution.

Premier Services

Our services span all phases of your solution life cycle, from analysis and design support, to software implementation, training and post-implementation support.
