

Broadcast quality video Production has changed and opened up to everyone

How One Team Of Professionals Developed An All-In-One Video Creation Platform That Helps Individuals And Businesses Create Free Broadcast Quality Videos Online.

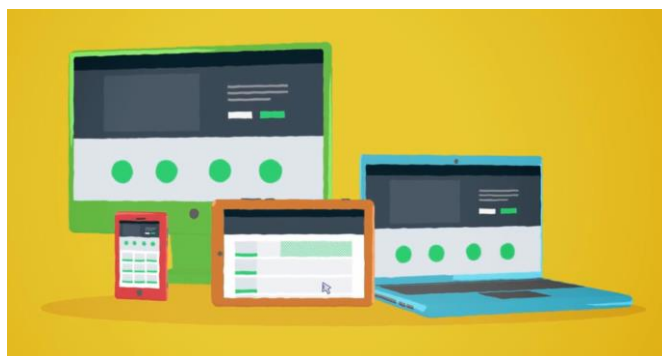

Created by a small team of video experts, [Renderforest](#), a free online video production platform, launched this January. Renderforest allows individuals and businesses to create broadcast quality videos including wedding, family and traveling photo slideshows, explainer and promotional videos, logo animations, kinetic typography and much more.

Video production has changed and opened up to everyone. Now individuals and businesses don't have to purchase expensive templates or software or hire a third-party production company to create broadcast quality videos. Users can use Renderforest to build broadcast quality videos from birthday or event invitations videos to logo animations.

Renderforest features easy-to-use tools and cloud storage and is suitable for both commercial and private use. Unlike other user-generated video websites, Renderforest offers a wide range of special effects and renders broadcast quality videos in less than 10 minutes. According to Renderforest founder Narek Safarayan, "Commercial videos used to take weeks, we knew we could do offer speed professional production without all of the hassle."
