

SAN Fernando Valley, CA – LGI Technology proudly announces the launch of its new Generation II LED Wall Pack Fixture.

The Gen II LED Wall Pack fixture is the latest addition to the Los Angeles-based, commercial-grade LED manufacturer's LED Fixture line up

“This new product offers a new flavor to our line up and compliments our fixture line” Product Manager Rob Setian said. “It covers the range and can replace any wallpack in the market”.

Gen II wallpacks are equipped with CREE LEDs and available in three options. The 40 watt produces 3800 lumens; the 60watt, 5800 lumens; and the 100 watt, 9800 lumens.

The Gen II LED Wallpack is powered by an industry Mean Well driver and is covered by a five-year warranty. Heat dissipation is not a concern as the back part of the housing is made of sturdy aluminum heat sink. The open design helps to strip away heat, keeping the fixture thermally cool.

More details and product data sheet are available at www.lgitek.com/

The Gen II LED Walpack ships from LGI's USA facility and is available in 5000K.
