

Centizen, Inc. Announces New Global Shore Service Delivery Model for IT Development and Support

Centizen, Inc., an IT solutions company, introduces Centizen-GlobalShore for IT development and support that addresses common problems associated with multi-shore outsourcing engagements.

Beaverton, OR, April 27, 2015 – Centizen, Inc. a global IT solutions, consulting and outsourcing company announced today the availability of a new global shore delivery model, Centizen-GlobalShore, for IT application development and support initiatives managed by Centizen or its client companies. This new model has been developed to address the common faults experienced by many companies that have outsourced IT development and support on a multi-shore basis over the past two decades. These faults have resulted in significant cost repercussions to the affected companies. Centizen-GlobalShore has also been designed with small and mid-tier client companies in mind as well as large traditional enterprises. With this new model, Centizen’s offers a pragmatic, effective and economical IT outsourcing solution for Centizen managed and client managed global shore IT development and support initiatives.

“The multi-shore IT outsourcing model has become a fundamental IT practice for most US companies. With Centizen-GlobalShore we have addressed the common faults experienced from multi-shore outsourcing initiatives that have gone awry. We also designed this model to fit any size of engagement or company and that could scale up or down with small to large outsourced initiatives as required” states Amal Devasagayam, Executive Director of Technology Services with Centizen.

Centizen-GlobalShore addresses the most common challenges of outsourced engagements that go over budget, miss deadlines and deliver overall low quality. Core to Centizen’s model is access to critical skills in demand at competitive rates and finely tuned development/support methodologies. Centizen will support this model with a network of IT experts who are available to provide their IT practice intelligence whenever needed. This expert network allows Centizen to bring the right combination of best of breed IT expertise required to fit each clients’ specific business and IT needs that are in scope. This expertise includes Application Development, Mobile Development, Analytics, ERP, IT Infrastructure and QA Automation.

“Centizen-GlobalShore is configured to each client’s unique situation for their outsourced engagement and is supplemented by our multi-tier IT expertise for any particular IT development and support issue that surfaces during the initiative, regardless of duration,” Mr. Devasagayam concludes.
