

NexGen Networks Introduces Wavelength Service Between US and UK

Expanded US-UK global connectivity provides clients with top-tier transatlantic infrastructure

NexGen Networks, the premier provider of fiber optic-based network solutions to the world's top financial services firms and global enterprises, has announced upgraded service between the US and UK with a pure wavelength service on TGN Northern and AC1 transatlantic cable systems. The upgrade will enable clients to utilize advanced transmission technologies to boost network speed and reliability.

"By providing our customers with access to the most sophisticated technologies in the marketplace, we continue to prove that we are the number one choice in global connectivity for enterprise clients," says Edward Lawson, SVP of Business Development at NexGen Networks. "In our utilization of the state-of-the-art Ciena 6500 platform to manage our wavelength services, we are providing customers who have ultra high capacity needs with a solution that maximizes power and efficiency."

NexGen Networks' wavelength service allows several streams of digital information to be put on different wavelengths of light without interference. Multiple streams of data can be carried simultaneously to provide higher capacity and lower cost for clients.

The connectivity upgrade between the US and UK continues NexGen's focus on connecting the most critical centers of commerce in the world. In recent years, NexGen has greatly expanded its presence in the UK, with space in multiple data centers in London, and now the most advanced infrastructure across the Atlantic Ocean. NexGen's services create optimal conditions for high-frequency trading in the New York and London stock and foreign exchanges. With London and New York combining to account for over 60% of foreign exchange trading volume, NexGen clients can expect a significant technological advantage over critical network paths.

About NexGen Networks

NexGen Networks, <http://www.nexgen-net.com>, is the premier provider of tailored, high-capacity communications services to carrier and enterprise customers. NexGen Networks is committed to delivering cost-effective, custom solutions coupled with superior industry expertise, service and support that allows for unparalleled time to market connectivity. It offers a comprehensive suite of facilities-based services including: Ethernet, SONET, Wavelength, Dark Fiber, Internet Access, Colocation and more. Its fiber optic network leverages unique rights-of-way that deliver connectivity to the major metropolitan areas in North America, Europe and the Far East. While consistently building upon its private and public IP and Ethernet expertise and evolving its capabilities to continually meet the needs of its customers, large and small, it has continued to maintain a superior standard of customer service and support.
