**FOR IMMEDIATE RELEASE**

**DATE:**

**December 15, 2016**

**HEADLINE:**

**Track Star Releases AVLS Version 6.1**

**BODY:**

Track Star International, Inc. is pleased to announce that the company has today officially released the latest version of its Automatic Vehicle Location System software, Version 6.1. This new release embodies a wealth of new features that will benefit all of the present users of the product as well as future users. Chief among these are the inclusion of engine diagnostic data, a Web Map Services (WMS) interface to GIS servers, adaptation of Microsoft Active Directory technology and a suite of dashboarding features. Combined, these features enhance the already powerful feature set of the AVL system. This new version also adds support for new GPS devices such as the Sierra Wireless GX450, the Sierra Wireless Telemetry accessory and the CalAmp Vanguard 5530. "I am extremely proud of this new version of our AVLS product. It represents the continued evolution of the system in synch with advancing technologies, a hallmark of the company since its founding in 2000.", said Michael Hughes, President of Track Star International, Inc. Electronic delivery of the new version to the existing customer base is underway and all new orders will be filled with this version.

Track Star International, Inc. is a privately held corporation engaged in the development of advanced Automatic Vehicle Location (AVL) systems that make use of Global Positioning System (GPS), wireless communication and digital mapping technologies. The company, headquartered in Charlotte, NC, has developed a suite of unique software products presently deployed in organizations of all sizes across a number of industries including government; law enforcement; utilities and energy; emergency response and general transportation. The Track Star AVLS products serve to provide increased levels of safety, efficiency and economy to vehicle fleet operators in the US and in a growing number of international locations.
