Synagro to Highlight Offerings and Services at WEFTEC 2017

Exhibit to Include Meet-the-Experts Tech Talk Sessions on Heat Drying Technologies and Phosphorus Regulations

BALTIMORE, Maryland, September 12, 2017 – [Synagro](#), the preeminent provider of biosolids and residuals solutions services in the United States since 1986, will highlight its offerings and services at WEFTEC* 2017, the Water Environment Federation's 90th Technical Exhibition and Conference, in Chicago, Illinois, September 30 to October 4, 2017 at McCormick Place.

Join us inside McCormick Place at Booth Number 2721 to learn about the many ways Synagro can assist you with biosolids management. From thermal drying and energy generation to digester cleaning, when it comes to biosolids, our mission is to be the most trusted provider of resource recovery solutions. We help our customers identify their needs and the solutions that are best tailored to most economically address those needs.

“We are pleased to be back at WEFTEC and join in celebrating its 90th year, in its birthplace – Chicago” announced Pam Racey, Synagro Vice President of Business Development. “I think wastewater professionals attending the conference will find our content and events to have real value. For example, on Monday, October 2 beginning at 5:00 p.m., our Tech Talk Happy Hour will feature an opportunity to meet some of Synagro’s subject-matter experts. Bala Vairavan, our senior engineer, will be on hand to discuss the pros and cons of various drying systems for differing applications from an operator’s perspective. His expertise includes scoping and selection of Class A biosolids technologies, oversight and implementation of capital projects, as well as startup, commissioning and ongoing operational support related to composting, thermal drying and other Class A technologies.”

“In addition, Layne Baroldi, Director of Legislative and Regulatory Affairs, will be available to discuss how changes in land application regulations to include phosphorus restricted application rates will impact biosolids management programs. Layne provides leadership and strategy on proposed legislation and regulations that could potentially impact the viability and cost of our customers’ biosolids-management programs and operations.”

To stay up-to-date on all of the Synagro’s activities at WEFTEC follow us on Synagro’s social media channels or check out our full calendar of events at www.synagro.com/weftec-2017/.

About Synagro

Founded in 1986, Synagro Technologies, Inc. provides environmentally sustainable solutions for commercial and municipal organizations that generate organic by-products. Synagro consistently transforms industrial and municipal waste into environmentally friendly resources that benefit our communities. As the largest recycler of organic by-products in North America, Synagro uses best-in-class processes, from beneficial reuse to renewable energy, that adhere to the strictest of environmental regulations to provide compelling solutions for communities across the continent. Serving more than 600 municipal and industrial water and wastewater facilities in the United States and Canada, Synagro's leading systems of organic by-product management services support municipalities of all sizes in saving money and meeting environmental regulations.
