FOR IMMEDIATE RELEASE
**CleanCut Technologies to Demonstrate Medical Device Packaging Innovation at
BIOMEDevice 2017**

ANAHEIM, CALIF. (October 30, 2017) -- Medical device manufacturers will have the opportunity to discover CleanCut Technologies' innovative line of custom medical device packaging products in **Booth #529** at the **BIOMEDevice 2017** Show on December 6-7 at the San Jose Convention Center.

CleanCut Technologies continues its effort to design and manufacture the most innovative and effective medical device packaging available. As a result, two new packaging designs will be exhibited - the "Vault Packaging System" and the "System Procedural Kit" - in addition to CleanCut's existing portfolio of packaging products

The **Vault Packaging System** is an innovative alternative to pouch-style packaging that provides superior retention and protection of medical devices. The system combines a universal thermoformed tray with the flexibility and versatility of CleanCut's HDPE pouch cards. By inserting a customized pouch card into a universal tray, changes to the card can be made quickly and easily - without the cost and long lead time associated with revising and manufacturing a mold for a tray change.

Another new packaging innovation developed by CleanCut Technologies, labeled the **System Procedural Kit**, creates a unique catheter and guidewire dispenser by configuring HDPE tubing to the specifications of your device and bonding it to a pouch card. Both the tubing and card can be configured to various shapes and sizes for superior device protection and functionality. The System Procedural Kit allows additional retention and packaging of procedurally related components such as syringes, luers, and needles.

"When designing and manufacturing medical device packaging, we approach each project with the mindset to not only make the packaging safe, sterile and durable, but to reduce packaging waste, assembly time, and shelf space," said Brian Whalen, Director of Sales & Marketing.

Attendees will be able to speak with onsite sales team members to learn more about CleanCut's end-to-end solutions including free design and prototyping, 3D printing, pad printing, tube flaring, and contract packaging services.

A drawing for a GoPro Hero will be held at the CleanCut **Booth #529** with the winner being chosen on the last day of the show.

About CleanCut Technologies, LLC

CleanCut Technologies is an FDA QSR registered and ISO 13485 certified one-stop source medical device packaging company located in Anaheim, California. Its products are manufactured in Class 7 (10,000) & Class 8 (100,000) certified environments with full traceability. For our full line of products and services, visit: www.cleancuttek.com or call 714-864-3500.
