Synagro's Pam Racey to Join Panel at The American Water Summit 2017

Discussion Will Focus on the Changes Sweeping the American Water Sector and the Emerging Opportunities

BALTIMORE, Maryland, November 21, 2017 – [Synagro](#), the preeminent provider of biosolids and residuals solutions services in the United States since 1986, is pleased to participate in [The American Water Summit](#) (AWS) 2017 in Austin, Texas, November 29 to 30, 2017. Now in its eighth year, The American Water Summit is the forum for discussion and decision making at the highest levels of the water sector, facilitating proactive public-private partnerships that will form the linchpins of the business in the years to come.

On Wednesday, November 29, AWS 2017 will bring together key players from the public and private sectors to explore the future of expanding partnerships to non-core operations in a panel discussion chaired by George Hawkins of DC Water. The panel of six will include Pam Racey, vice president of project development, Synagro.

“It is an honor to be asked to participate in The American Water Summit,” said Ms. Racey. “There are many partnership opportunities emerging in the non-core operations sector, in particular in resource recovery of by-products from water and wastewater treatment. At Synagro, we see numerous new opportunities to capture the energy and organic benefits from biosolids and residual organics and we are excited about the prospect of partnering with the public sector to deliver real value to both the rate payers and the environment.”

Ms. Racey is a business development leader with 25 years of experience in the implementation and operation of municipal biosolids management projects. Her career has focused on many different facets of biosolids management including legislative and regulatory affairs, permitting, public outreach, utilization of biosolids products, and solution development. For the past 15 years, she has been dedicated to developing and implementing public-private partnerships for Synagro's biosolids management facilities.

About Synagro

Founded in 1986, Synagro Technologies, Inc. provides environmentally sustainable solutions for commercial and municipal organizations that generate organic by-products. Synagro consistently transforms industrial and municipal waste into environmentally friendly resources that benefit our communities. As the largest recycler of organic by-products in North America, Synagro uses best-in-class processes, from beneficial reuse to renewable energy, that adhere to the strictest of environmental regulations to provide compelling solutions for communities across the continent. Serving more than

600 municipal and industrial water and wastewater facilities in the United States and Canada, Synagro's leading systems of organic by-product management services support municipalities of all sizes in saving money and meeting environmental regulations. Visit synagro.com to learn more.
