

PEMF

Curatronic

FLASH

The Curatron FLASH stores enormous amounts of energy at a very high voltage in a supercharged capacitor which is discharged by a very high voltage and very high current solid state semiconductor with under precise computer control into the PEMF coil.

The Curatron FLASH PEMF unit has 10 internal computer controlled programs offering a wide choice for various treatment possibilities.

The optional computer software allows you to track sessions, and create custom protocols for patient treatments.

The multipurpose coil can be used both as a regular coil and folded as butterfly coil.

**Optional 7x7 Pad
5400 Gauss & 7000 Gauss
with the optional Booster**

An optional 18" x 23" mat is available for treatment of larger body areas.

FLASH

*pain therapy
cartilage wear
sports injury
bursitis
arthritis
osteoarthritis
rheumatoid arthritis
osteoporosis
inflammation
chronic back pain
spinal stenosis
disc herniation
scoliosis
strains*

Curatronic

The Curatron FLASH helps decrease pain and swelling by improving and increasing the transport and absorption of calcium in bones resulting in the improved quality of cartilage in joints preventing bone-on-bone aggravation.

FLASH therapy operates as Pulsed Electromagnetic anesthetic, relieving pain associated with connective and soft tissue injuries, promoting healing, while reducing fluid retention.

Computer controlled.

Compact and portable.

Easy to operate.

7000 Gauss of

PEMF Energy

FLASH

*Ideal
Application for
Chiropractors*

*The Curatron Flash
uses superior solid-state
technology that will
not wear out.
It is controllable,
predictable
and repeatable,
delivering the best
quality high voltage
discharge PEMF
in the industry.*
