SOLVE CARE

Healthcare Payments and Administration on Blockchain

Offering summary

In the case of 3-year-old Edrian and his parents, the search for healthcare services for his needs proved to be a logistical nightmare.

What stood between Edrian, his family and an acceptable healthcare experience?

Time
- Finding a doctor
- Getting an appointment
- Handling all the paper work
- Spending hours on the phone with insurance company to get approvals
- Coordinating with specialists

Quality
- Spending nights reading about his condition on the web but not knowing if he is being treated properly
- Spending hours and days trying to get all parties to share and review the latest medical information
- Wondering if we can make life style and dietary changes that would help him

Expense
- Too many bills from a single visit
- Out of pocket expenses
- Covered expenses
- Constantly changing information about deductibles, co-pay, co-insurance, in/out-network

The future of global health care

Mission statement. Solve.Care aim is to alter the way healthcare is administered around the world – while generating value for all stakeholders: patients, physicians, hospitals, insurers, employers, government agencies and investors. With a significant contract in hand that covers thousands of doctors, hundreds of medical facilities, Solve.Care is set to redefine care coordination and healthcare administration, and improving payment accuracy through innovative use of Blockchain technology combined with deep healthcare expertise.

Solve.Care Care.Wallet allows direct interaction among consumers, physicians, other care providers and insurers to improve access, reduce costs and streamline payments of healthcare, regardless of who is paying for the services.

Healthcare on blockchain solution built from the ground up. Solve.Care soluton is built from the ground up using Blockchain technology in a way that will alter the way health care transactions are handled in the US and around the world.

Brings distinctive advantages to patiens, doctors and insurers

Personal healthcare coordination. Doctors and patients will have an easier time staying in sync while eliminating the need to sit on the phone for hours. Care.Wallet application allows patients, care providers and insurers to easily coordinate availability of doctors, make appointments, reschedule appointments, check insurance benefits, compare pharmacy costs, review bills and make payments. Care.Wallet also identifies gaps in care by comparing medical best practices with personal care events. Care.Wallet learns about the patients' needs and preferences and presents personalized Care.Cards to the wallet holder. The distributed ledger technology keeps everyone in sync on what is happening and why.

Effective healthcare usage and payments. Patients need to choose best healthcare provider based on expertise and availability, manage their expenses, understand their insurance benefits and utilize healthcare services to get well quickly. Care.Cards make these tasks easy, smooth and automatic in most cases. Solve.Care has built a programmable healthcare currency called Care.Coins that practically eliminate the payment inefficiency, and reduce abuse, waste and fraud in healthcare payments. Care.Coin is a client-issued stable value payment token that can be easily exchanged, tracked and brings real-time payment intelligence.

Solutions is for everyone

Doctors
Take better care of your patients

Patients
Manage and coordinate care for yourself and family

Employers
Offer better health benefits to your employees

Government
Reduce healthcare costs and avoid unnecessary human suffering

Administrators
Streamline billing and make accurate and real time payments

Insurers
Eliminate expensive call centers and replace frustration with delightful user experience

Executive leadership

Pradeep Goel is a founder and Chief Executive Officer of Solve.Care Foundation. Pradeep has been in the CEO, COO, CIO and CTO roles at various innovative healthcare technology companies for more than 25 years. He has unique experience, deep healthcare expertise and unique combination of skills that combine health and human services, finance and technology. In particular, he has built multiple healthcare solutions for insurance companies, clinical organizations, employer-sponsored benefits and government healthcare programs. His unique experience with healthcare, IT, enterprise solutions and financial technologies has allowed him to leverage Blockchain in the right way to transform healthcare around the world. Also, Solve.Care acquired Ukrsoft in 2017 and today has more than 50 professionals working on delivering the solution to US client in the first quarter of 2018 followed by a world-wide launch.

Who benefits from Solve.Care?

Care Providers

Doctors take the Hippocratic oath to take care patients — not for being superb administrators. Care.Wallet has the intelligence to automate patient appointments, eligibility checking and care coordination. Solve.Care helps doctors with managing patient consent, handling appointments, sharing records with other professionals and doing it all in a way that reduces the likelihood of litigation. Solve.Care makes it possible for doctors and other service providers to get paid sooner, faster and more accurately, so they spend less time pursuing collections.

Insurers

Greater Cost Efficiency Can Mean Higher Profits for Insurers. Lower administrative costs can improve cash flow, while decentralizing and consolidating burdensome functions that subtract profits and add risk. Solve.Care's technology permits insurers to improve services to patients, providers and employers, with less staff, fewer portals and real-time capability and accuracy.

Investors

Solve.Care Tokens Offer an Attractive Alternative to Traditional Investments. Investors looking for selections beyond the conventional array of stocks bonds and mutual funds can expect Solve.Care tokens to track closely to the growth of the underlying platform as demand becomes more widespread. Due to the outstanding growth potential of reducing healthcare administration costs and reducing healthcare utilization, Solve.Care management expects a significant increase in demand for its platform tokens over coming months.

Wealth managers

For Wealth Managers, Solve.Care Tokens Offer a Low-Volatility Alternative for Client Portfolio Allocations. Solve.Care tokens can be a powerful non-correlative alternative investment strategy designed to provide:

- A risk-managed approach to investing
- Capital appreciation potential as demand increases for Solve.Care tokens
- Broad access to a new highly liquid market of digital tokens
- Massive growth potential in the US and worldwide in a blue ocean market opportunity

A look ahead

As Care.Wallets communicate among insurers, service providers and individuals, everyone in the chain will have the right access to information for the right reason at the right time. Each Care.Card acts as smart card that makes every individual an insider, participant and manager of their own healthcare. The potential of Solve.Care to eliminate waste in the healthcare system is extraordinary. In the U.S., where hospitals have the highest administrative costs among the eight most-industrialized countries, 25% of U.S. hospital spending consists of administrative costs including primarily of staff to handle scheduling, coding and billing.
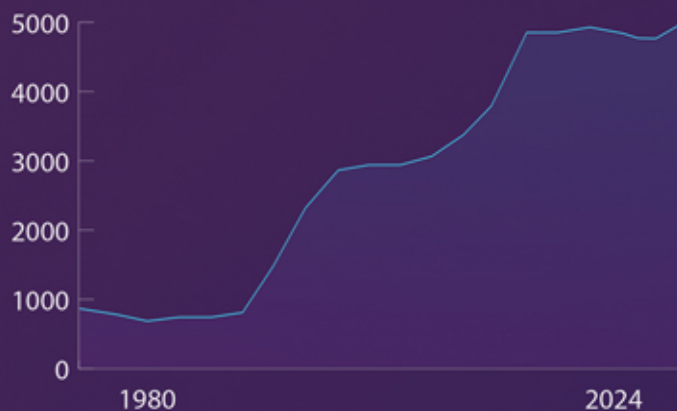

Healthcare on Blockchain
Global blockchain solution for coordination, administration and payments of healthcare

Outstanding growth potential

National Health Expenditures Projected to Increase Dramatically through 2024
