AirGMS and EveryDoor Announce Partnership to Streamline Short-term Rental Property Management

Property management businesses benefit from adding check-in automation to their property management systems.

AirGMS and EveryDoor, two Vancouver based companies leading in the vacation rental technology market, have just announced the availability of an integration between their vacation rental business tools. Now, professional short-term rental property managers using AirGMS can easily automate keyless check-ins at all of their apartment and rental properties using EveryDoor's intercom and smart-lock automation system.

AirGMS offers Airbnb vacation rental software to help hosts organize and manage multiple listings from one application, while EveryDoor eliminates key exchanges and makes it easy to manage keyless access for guests and maintenance workers. Starting in 2018, AirGMS customers can quickly and easily connect their listings to EveryDoor and create a secure, automated keyless access system for their guests and cleaners.

EveryDoor is the room key software system for short-term rental companies. It eliminates in-person key exchanges and lock boxes by connecting to every smart-lock, buzzer/intercom, and property management system and making it easy to automate and oversee check-ins and access security for many properties from one dashboard.

"We are thrilled to announce the launch of our collaboration with AirGMS, they're very well respected among our customers for their first-class Airbnb PMS. The fact that we have been able to create such a seamless integration is going to create a lot of new value for both of our customers."
-Daniel Fraser, CEO of EveryDoor Services

"Hundreds of Airbnb hosts around the world using our software consider check-in automation extremely important. So we are very enthusiastic about our partnership with EveryDoor that is aimed to fully automate key exchange. By sharing our API with partners we strive to streamline business operations for Airbnb managers and plan to roll out more integrations quite soon."
-Igor Kostin, Co-founder and CTO of AirGMS Technologies
