Security Pros Find Eco-Friendliness And Productivity Reign Supreme At ISC West

All-In-One Cable Distribution System From Lake Cable Is A Standout

Bensenville, IL (April 5, 2018) - For years, wire and cable installers in security-based environments like clean rooms and data centers have found themselves working around a limited utility cart and leaving behind an excessive amount of on-site waste upon completion of the job. However, visitors to this year's ISC West show from April 11th – 13th may be surprised to find that certain manufacturers are gearing their offerings toward increased efficiency to make each install that much easier.

Take Lake Cable, for example. This 4th generation wire and cable manufacturer has always been known for superior cable in the security category that installers often use. However, when many of those same installers recently expressed a desire to simplify transport and payout of the access control reels they were using, Lake Cable developed a powerful extension of its brand called the CableM8. The distribution system acts as an all-in-one cart in which the security installer can pull up to 6,000 feet of cable at a time, anchored by a customized steel rod pipe within the CableM8 for smooth, consistent delivery.

Don't be surprised to see exhibitors at ISC West also offering a more eco-friendly approach with their product lines so that efficiency goes hand-in-hand with leaving less of a carbon footprint.

In the case of the CableM8, Lake Cable made it its mission to develop a product that would reduce on-site waste by 30x. The company arrived at the solution by including CableM8 Bags, an innovative shrink-wrap package that offers a smarter alternative for on-site waste disposal as opposed to traditional cardboard boxes. The security installer can now load as many as 4 eco-friendly CableM8 bags onto the CableM8 as well as up to 2 boxes. When the install is complete, the used packaging is stuffed into an empty CableM8 bag for easy recycling.

Since the original 8-bin CableM8 was introduced, Lake Cable has added a 4-bin version to the line as well as bin sets that retrofit an installer's existing cart.

To see the full versatility of the CableM8 and CableM8 Bags on display, professionals in the security industry can visit Lake Cable at Booth #2051 at ISC West.

ABOUT LAKE CABLE

Why have security professionals counted on Lake Cable for decades? Our lines of superior cable have the versatility to perform in a wide range of system environments, including access control, alarms and monitoring, video surveillance, networked security and more. Stop by Lake Cable's booth and check out the most advanced version yet of the CableM8, our cable distribution system that's certain to change the efficiency of your installs forever... *When Delivery Matters.*
