## Conveyor Application Systems Launches New Interactive Website!

Eugene, OR, **Conveyor Application Systems** ([www.slingers.com](http://www.slingers.com)) has launched the Slinger industry's first interactive website, [www.slingers.com](http://www.slingers.com). Like the Slinger equipment **Conveyor Application Systems (CAS®)** manufacturers, the new website is loaded with features and functionality. [www.slingers.com](http://www.slingers.com) also allows users to view videos and photos in various application environments so potential customers can see how **CAS® Slingers** perform placing a variety of materials. In addition, users have the opportunity to visit the highly interactive **Customer Corner**, <https://slingers.com/customer-corner/>, where they can post their own **CAS® Slinger** photos and videos! There is even a photo/video contest of the week!! One particular area getting a lot of interest is **The Slinger Advantage** page, <https://slingers.com/the-slinger-advantage/> where users can compare the amount of time it takes to "place" 20-yards of material by hand compared to using a **CAS® Slinger Truck** or AT7. The **Slinger Advantage** puts into perspective the huge time savings a **CAS® Slinger** can provide!

"Our goal with this website was to build a high-quality website that is loaded with functionality and useful tools that clearly demonstrates the variety of slingers we manufacturer," said **Conveyor Application Systems**, Director of Sales & Marketing-Don Lindsey, "and I think the first phase of [www.slingers.com](http://www.slingers.com) has done a nice job of doing just that."

Don Lindsey also stated: "The secret is out about Slingers, how they are used and the advantages of owning a Slinger. Therefore, we are doing our part to ensure contractors are able to easily access the information they need so they can **better understand how these labor saving, money making machines work.**" "We never stop improving the Slingers we build and this will also apply to this new website, so we have already started phase two of the website build as we continue to add in additional functionality and robust content to ensure [www.slingers.com](http://www.slingers.com) is THE top industry resource."

**Conveyor Application Systems (CAS®)**, based in Eugene, Oregon, is a leading manufacturer of on-road, off-road, and reload conveyor "Slingers" in the world and is **the only Slinger manufacturer located in the United States of America** is owned and operated by a third generation at Rexius Corp., [www.rexius.com](http://www.rexius.com), which is a nationally recognized, full-service provider of landscape materials and services.
