

How to Eliminate Additional Catheter Packaging Altogether

Dual Hoop Catheter DISK

By adding a second coiled hoop to the backer card, the Dual Hoop Catheter DISK is a cost and time-saving solution for distributing catheters and guidewires.

- The DISK dispenses multiple catheter and guidewires plus retains procedurally related components in one convenient system. This eliminates the need to manufacturer extra pouches, shelf cartons and shippers - significant savings for medical device manufacturers!
- Medical professionals are impressed with the the reduction in prep time to open pouches and assemble various components.
- Tubing can be manufactured in lengths from 15" - 271" to accommodate any guidewire or catheter size.
- The backer card can be printed with company logos, usage instructions, part numbers and more with CleanCut's in-house pad printing service.
- Manufactured in ISO Class 8 & Class 7 cleanrooms
