TimeLinx Announces Next-Generation, Fully Interoperable Mobile Platform *Extends CRM/ERP functionality to field services teams*

North Andover, Mass., April 22, 2019 -- TimeLinx, a leading project and service management platform for the mid-market, has unveiled its upcoming next-generation mobile platform. With general availability by late summer, the full-featured solution will be device, platform and browser agnostic and include the ability to work offline.

"This represents a tremendous opportunity for companies to extend their CRM/ERP functionality to their field service teams," said TimeLinx Executive Vice President and General Manager Jeffrey Gregorec. "The agnostic nature of the platform lets companies take full advantage of this new capability with virtually no change to their corporate or in-the-field IT infrastructure."

The mobile platform will enable work, such as time/expense entry, project management, alerts, signature capture and much more to be performed offline. Once connectivity is reestablished, it automatically synchronizes all data.

Gregorec estimates alpha testing will begin in May with beta testing starting as early as June.

"We already have clients and partners volunteering for our testing program," Gregorec noted. "Although, we are still open to adding several more use cases."

"The entire TimeLinx team is excited about bringing this whole new level of functionality, capability and efficiency to our clients," Gregorec said. "But what's really exciting – there's a lot more to come."

About TimeLinx www.TimeLinxSoftware.com

TimeLinx is specifically designed for the needs of services-based companies. It extends a CRM or ERP platform's capabilities to provide users with complete control over their entire customer lifecycle, from lead management to project delivery. Founded in 2001, TimeLinx Software is headquartered near Boston, MA, with offices in Chicago, Scottsdale, Dubai and Mumbai.
