## ECM Opens Calibration Office in Wixom Michigan

### Expanding Calibration and Services Division in Midwest

Topsfield, Massachusetts: On June 23, 2020 East Coast Metrology, LLC. (ECM – Global Measurement Solutions) announced the opening of a new training, service, calibration and retrofit facility in Wixom, MI.

ECM recognizes the vital need for superior support to its Automotive, Aerospace and wide array of customers in the Midwest region. "For many years ECM has supported multiple high-profile customers with our remote employees located in Michigan, but until now we have not had our own facility in the area, states Gary Confalone, President/CEO of ECM. With the continued expansion of ECM Global it has become essential to have an expansive facility in support of our Midwest customers." As some companies withdraw from the Midwest, ECM is expanding into the region and intends making this their largest support center in the USA. ECM's new Midwest Regional Office is now located in a facility at 46998 Magellan Drive, Wixom, MI 48393 which may be familiar to many Midwest industry customers as the building that for the past 20 plus years belonged to FARO Technologies. If you are an existing FARO customer, know that ECM will have a facility that continues to provide support moving forward. If you have other OEM brands

of Laser Trackers, Articulated Arms and traditional CMM's; know that ECM is also providing service support and calibration for those systems. The new facility will allow complete retrofit and refurbishment of CMMs for customers looking to update or expand the capabilities of their shop.

ECM's Midwest Regional Office will be fully outfitted with a climate-controlled ISO/IEC 17025:2017 Accredited Laboratory. Companies that are accredited to the ISO/IEC 17025 standard are regularly evaluated to assure our customers that ECM maintains the highest quality standards essential throughout the industry.

For manufacturers, engineers and others who rely on high precision measurement, training and engineer support services, ECM provides professional consulting across multiple industries that integrate production processes with reliable, high-tech tools. Through our long-developed alliances with equipment manufacturers, ECM is able to provide unparalleled support regardless of your equipment make or model. Unlike any other metrology service provider, ECM stands firm in its commitment to meeting customer's project needs from start to finish.
