Q-Tran Releases MICRO 5 Flexible Fixtures

Enlightened Thinking: The Future is Here

Milford, CT – Connecticut-based lighting manufacturer Q-Tran, Inc., is proud to announce the release of MICRO 5 flexible fixtures. Q-Tran's smallest line of flexible LED lighting fixtures, WAVE, NEXUS, ANYBEND, and WALA are inspired by some of the most popular Q-CAP fixtures and allow for a variety of bend options.

Q-Tran's extensive portfolio already included small lighting solutions, but now they've gone MICRO. The ultra-slim profiles are a discrete lighting solution for nearly any architectural design where space is limited, blending functionality and performance.

Micro 5 flexible fixtures provide delivered color temperatures of 24, 27, 30, 35 and 40 on the black body curve all over 90CRI, while offering versatile mounting hardware options. Suitable for indoor or outdoor use in both wet and dry locations, the family of MICRO 5 flexible lighting solutions offers creative freedom to make designs come to life. Available in 1" (SW) and 2" (DW & RGB) cut points, 1 watt, 2 watts and 4 watts per foot, these fixtures can deliver up to 313 lumens in 4000K at 4 watts per foot.

Q-Tran, Inc. was founded in 1993 in response to an industry need for transformers specifically designed for low voltage lighting. The company has grown to sell over 300 varieties of Transformers and LED Power Supply Centers. In 2013, Q-Tran introduced Linear LED Lighting and Extrusions, quickly becoming one of the most trusted names in the industry.

Q-Tran is an industry leader who applies high standards, innovation, and dedication to producing only the highest quality products. Q-Tran proudly designs and manufactures lighting solutions in Milford, Connecticut.
