

Area Temps Mobile App

The newly released Area Temps Mobile App is here!

The new Area Temps Mobile App is built on top of the *Area Temps Website*. The Mobile App has all the same features that are currently found on the Website. www.areatemps.com. All the main functions can be accessed in the same way as they are on the Mobile Website.

Using **Search Jobs** enables a search for open positions on the Area Temps Job Board. Posting and approving timesheets with **eTimesheets** webapp, applying online with the **eRegistration** webapp, and using the **Contact Us** via phone, email, or chat (*coming soon*) to reach our staff. Anything that can be done on the mobile website can also be done in the new Area Temps Mobile App. This is just the base version of this application, and there will be many new futures and functions added that will only be available in the App. For this reason, we want to encourage all our client customers, and temporary employees to transition from book marking the Website on their smart device and move to using the Area Temps Mobile App.

The Mobile App can be download directly from our websites Mobile App Download page At: www.areatemps.com/appstore Simply scan the QR code on your smart device. The Mobile App is currently available for Apple iOS Devices (iPhone & iPad), and Google Android. Future releases will include Microsoft Windows operating systems.

Marc Castelluccio - Mobile App Project Manager.
