

Premium Activated Carbon Filtration Products

Engineered H2O is a leader in activated carbon filtration products. We collaborate closely with our customers, delivering exceptional responsiveness. EH2O is laser focused on driving rapid development accelerating the pace of innovation and delivering breakthrough solutions faster and better optimized to meet the evolving water quality demands and the needs of our global customers.

At Engineered H2O, we manufacture a broad range of activated carbon filtration products at our state-of-the-art production facility in Palmetto, Florida. Utilizing the latest production equipment and technology, we produce high-quality products with industry-leading claims. Our agile design and manufacturing capabilities allow us to swiftly bring your next project from concept to reality in record time.

Every Engineered H2O product is proudly manufactured in the USA. Our highly automated plant leverages the latest technology to optimize processes, enhance efficiency, reduce waste, and lower production costs. As a USA-based manufacturer, we take pride in delivering the highest quality and performance for residential, commercial, and industrial applications.

Filters are manufactured with EcoSorb a 100% coconut shell carbon that is both renewable and ecologically sustainable. This unique blend features superior adsorption capability, and exceptional purity. Our innovative technologies are driven by our corporate commitment to making water cleaner and our world a more sustainable place.

Ameri-Block offers a comprehensive selection of standard 2.5" and 4.5" diameter double open-ended (DOE), drop-in style filter cartridges. Our products are available in 10", 20", and 30" lengths. Manufactured from the highest quality FDA-approved materials, they deliver premium performance and feature industry-leading claims.
