Navigating the Microalgae Investment Landscape

Highly productive and environmentally sustainable microalgae offer compelling breakthrough opportunities. Which investments have the best potential for success?

Twenty years ago, governments and private investors poured d billions into algae biofuel ventures, and none achieved commercialization. Understandably, many investors were discouraged by these failures. This past decade, however, has seen a renewed interest microalgae ventures.

Many recent investments favor companies with higher value products that do not require massive commercial scale. These ventures are in food technology, alternative protein, natural colors, nutraceuticals, cosmetics, bio-medicinals, animal and aqua feed, plant bio-stimulants bio-materials, wastewater treatment and the potential of carbon capture.

spirulina

source

To quickly educate and help investors navigate this microalgae landscape, Spirulina Source has produced a series of reports from the largest structured database of microalgae companies, including active investments in 100 microalgae companies and a global database of over 600 spirulina producers and their products.

About Spirulina Source

Robert Henrikson, founder of Spirulina Source and Smart Microfarms has over 40 years of experience in the microalgae industry. Robert was one of the founders of Earthrise Farms in California in the 1980s, the first commercial spirulina farm in the USA, and still operating today. He developed and marketed spirulina products in 30 countries worldwide, has installed algae microfarms and advised entrepreneurs, corporations and investors on microalgae business plans. He has authored numerous publications and books, produced over 50 educational videos, and presented at conferences worldwide.
