

Long Beach, CA – May 2025 – Tektite Genome, a company focused on sustainable biotechnology, has announced new developments aimed at expanding its range of health and eco-friendly products through 2027.

The announcement reflects the company's focus on applying scientific advancements to meet the rising consumer demand for sustainable options.

Market research indicates a growing interest in eco-conscious products.

Reports from JPMorgan Insight and S&P Global project a 7-10% compound annual growth rate (CAGR) for sustainable cleaning products. Tektite Genome is focusing on nanotechnology and molecular biology to develop efficient cleaning solutions, projecting a 5-8% growth in this area.

"Tektite Genome is dedicated to environmental harmony and playing a pivotal role in ensuring safety and sustainability for future generations," said Scott Crow, founder of Tektite Genome.

The company's key product, a food-safe All-Purpose cleaner, emphasizes safety for households without compromising health or environmental standards.

Tektite Genome is also broadening its presence in the health and wellness sector, with personalized supplements and therapeutics. Market data from JPMorgan Insight and S&P Global suggests potential growth in this segment of 6-8%.

Tektite Genome has also launched the Bio-Rejuvenation Center, a medical clinic providing cancer treatment and prevention strategies, as well as gene therapy treatments. This initiative is designed to integrate research with patient care.
