FOR IMMEDIATE RELEASE

Charter and Go Teams Up with Spire Aviation to Bring Satellite-Based Flight Tracking to Charter Operators

**Real-time aircraft updates and enhanced global ADS-B coverage powered by
satellite and ground-based data fusion**

Keller, TX – [July 8, 2025] – Charter and Go, a flight management software company serving the air charter industry, has partnered with Spire (NYSE: SPIR) to integrate satellite-based tracking directly into its charter management platform. The partnership gives charter operators access to Spire's network of satellites for better flight tracking. As a result, Charter and Go's software handles everything from flight scheduling and tracking to flight log auto updates, Pilot

logs, and maintenance tracking. Now, by tapping into Spire's LEMUR satellite network, charter operators can unleash the power of space-based flight insights they can instantly use – getting a clearer picture of where their aircraft are even in remote areas where traditional radar / swim coverage falls short.

The partnership delivers live flight insights and enhanced global ADS-B coverage through satellite and ground-based data fusion, giving operators comprehensive visibility of their fleet operations. For Charter and Go, partnering with Spire Aviation is another way the company delivers on its commitment to providing customers "The Right Information at the Right Time."

What This Means for Charter Operators

The integration brings several practical benefits to day-to-day operations:

- Global aircraft tracking that works beyond traditional radar/swim coverage
- All tracking information flows directly into existing Charter and Go flight logs
- Better visibility for operators managing multiple aircraft
- Enhanced safety through improved situational awareness

"We appreciate how Spire Aviation is working with Charter and Go in order to support our charter operators in ways other systems cannot. By having Spire Aviation auto update our flight logs, it improves the overall safety of a charter operator. Something that we hold dear at Charter and Go." - Christian Huff, CEO and Co-Founder

"The partnership brings space-based intelligence directly to charter operators, empowering faster, safer, and more cost-efficient operations. Through this integration, Charter and Go delivers unprecedented visibility and operational clarity across global charter flights." - Johan Alex Varghese, Head of Partnership and Commercial, Spire Aviation

Charter and Go & Spire will demonstrate the integrated system at NBAA BACE 2025 in Las Vegas (October 14-16) at Booth #3125. Visitors can see live demos of how satellite data flows into the Charter and Go platform and what that means for flight operations.

About Charter and Go

Based in Keller, Texas, Charter and Go is a leading aviation software company dedicated to serving the air charter industry with comprehensive solutions including flight scheduling, fleet management and maintenance tracking. The company's innovative software solutions help charter operators streamline operations and enhance safety.

About Spire

Spire is a global provider of space-based data and analytics that offers unique datasets and powerful insights about Earth from space, enabling organizations to make decisions with confidence, accuracy, and speed. Spire uses a proprietary constellation of multi-purpose

nanosatellites called LEMUR (Low Earth Multi-Use Receiver), which capture global aircraft movements using ADS-B signals, which combined with multi-terrestrial data sources, provide enhanced global coverage, not just over inhabited regions, but also in remote locations and above the deep ocean. From historical flight data, ADS-B tracking, airport operations, to up-to-date data on weather impacting aviation operations, Spire's versatile datasets help companies power applications, drive decision making and improve cost efficiencies.
