

ThinPrint Picks Up the Pace

With the new .print Version 7.6, ThinPrint once again considerably optimizes its technology-leading and globally-recognized print solution for distributed systems and accelerates the already rapid print output by up to a factor of 5.

(Berlin, August 2007) But it isn't just in the speed alone that sets ThinPrint apart from the competition. The flexible architecture already enables the use of ThinPrint .print in almost all distributed systems. With the new Version 7.6, an additional license model has now been released in order to ensure a licensing as fair as possible in all environments.

The ThinPrint .print technology is a must for deployment in all distributed network environments, where high requirements on printing management are inherent to the system. Aptly demonstrated with the technology recently being integrated by VMware into the desktop virtualization solution ACE 2.0, enabling secure and driver-free print functionality.

Users now experience a dramatic increase in speed of the print data transmission thanks to the new function "Adaptive Speed" in Version 7.6. Adaptive Speed intelligently decides whether to compress the print data and which algorithm to use for compression. In this way, the transmission speed can be increased by an enormous amount dependent on the available bandwidth.

"With Version 7.6, we set another milestone in the development history and offer our customers the fastest .print software of all time," says Charlotte Künzell, General Manager at ThinPrint GmbH. "The adjustment of the license model also ensures that the use of our proven technology in every distributed environment now always also allows for fair pricing."

The new .print Engine 7.6 is now available from over 500 channel partners in more than 80 countries.

A 30-day demo version can be downloaded free from the manufacturer's website www.thinprint.com.

ThinPrint GmbH

ThinPrint specializes in optimized print data transmission for distributed networks. ThinPrint's .print technology has established itself as the technological leader in print management software, and is used today in companies of every industry and size in all regions of the world. The application spectrum of the .print technology is widely diversified and provides highly efficient print management in, among others, Terminal Services environments, client/server architectures, SAP environments, web and mobile applications, with Host Printing, and in virtualized server or desktop environments.

An extensive sales network with more than 500 qualified distributors and resellers in over 80 countries ensures optimal customer service on location. Additionally, 120 ThinPrint employees at headquarters in Berlin (Germany) as well as at the branch offices in Denver, Colorado (USA); Cleveland, Ohio (USA); and Sydney (Australia) provide for continuous growth.

Strategic and OEM partnerships with leading global hardware and software manufacturers allow the ThinPrint .print technology to be used like no other print management solution – in practically every distributed network environment – with printers, print boxes, and thin clients. ThinPrint's .print technology is compatible with devices from manufacturers such as Hewlett-Packard, Lexmark, Kyocera-Mita, Ricoh, SEH, Wyse, Neoware, and many more.

The most important strategic partnerships with companies include Citrix, Juniper Networks, Microsoft, and VMware.
